Note: Within nine months from the publication of the mention of the grant of the European patent, any person may give notice to the European Patent Office of opposition to the European patent granted. Notice of opposition shall be filed in a written reasoned statement. It shall not be deemed to have been filed until the opposition fee has been paid. (Art. 99(1) European Patent Convention).

EP 0 506 478 B1

Description

This invention relates to 3,4,4-trisubstituted-piperidinyl-N-alkyl-carboxylates and their methods of use as peripheral opioid antagonists.

A substantial body of evidence indicates that peripheral opioid peptides and their receptors have a major physiological role in the regulation of gut motility. Consequently gastrointestinal disorders such as idiopathic constipation and irritable bowel syndrome may relate to a dysfunction of opioid receptor mediated control and, agents which act as antagonists for these receptors may benefit a patient suffering from such a dysfunction.

Natural and synthetic opiates such as morphine have been used extensively in the mediation of pain. However, these agents can produce undesirable side effects such as constipation, nausea, and vomiting which are peripheral to the desired action as analgesics. Thus, a peripheral opioid antagonist should not substantially affect the analgesic effects of the opiate while acting to control gastrointestinal function and to minimize the undesirable side effects of the narcotic drug.

A number of opioid antagonists have been reported including naloxone and naltrexone (Blumberg *et al.*, *Toxicol. Appl. Pharmacol.*, 10, 406, 1967). These compounds are disclosed as having useful analgesic activity and in some cases acting as potent narcotic antagonists.

It would be advantageous to have compounds which would act as antagonists to the peripheral effects of opiate analgesics and endogenous opioid peptides. It would also be advantageous if these compounds had a minimal effect on the analgesic activity of the opiate drugs. It would be further advantageous to have compounds which can act to minimize the effects of idiopathic constipation and irritable bowel syndrome.

It has now been found that the N-substituted piperidines of the instant invention are useful as peripherally selective opioid antagonists. The instant compounds can also be useful in relieving the symptoms of idiopathic constipation and irritable bowel syndrome. Certain of the instant compounds are also useful as intermediates in preparing new piperidine compounds.

According to the present invention there is provided the trans-3,4-isomer of a compound of the Formula

wherein:

R¹ is hydrogen or C₁-C₅ alkyl;

R² is hydrogen, C₁-C₅ alkyl or C₂-C₆ alkenyl;

R³ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, phenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl, or phenyl-substituted C₁-C₃ alkyl;

A is OR⁴ or NR⁵R⁶;

wherein:

R⁴ is hydrogen, C₁-C₁₀ alkyl, C₂-C₁₀ alkenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl or phenyl-substituted C₁-C₃ alkyl;

R⁵ is hydrogen or C₁-C₃ alkyl;

R⁶ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, cycloalkyl, phenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl, phenyl-substituted C₁-C₃ alkyl, or (CH₂)₄-B; or

R⁵ and R⁶ are each CH₂ which together with N form a 4 to 6 membered heterocyclic ring;

wherein:

B is

10 or NR^7R^8 ;
wherein:

R^7 is hydrogen or $\text{C}_1\text{-C}_3$ alkyl;

15 R^8 is hydrogen, $\text{C}_1\text{-C}_{10}$ alkyl, $\text{C}_3\text{-C}_{10}$ alkenyl, cycloalkyl-substituted $\text{C}_1\text{-C}_3$ alkyl, cycloalkyl, $\text{C}_5\text{-C}_8$ cycloalkenyl, $\text{C}_5\text{-C}_8$ cycloalkenyl-substituted $\text{C}_1\text{-C}_3$ alkyl, phenyl or phenyl-substituted $\text{C}_1\text{-C}_3$ alkyl; or

R^7 and R^8 are each CH_2 which together with N form a 4 to 6 membered heterocyclic ring;

20 W is OR^9 , $\text{NR}^{10}\text{R}^{11}$, or OE;
wherein:

R^9 is hydrogen, $\text{C}_1\text{-C}_{10}$ alkyl, $\text{C}_2\text{-C}_{10}$ alkenyl, cycloalkyl, $\text{C}_5\text{-C}_8$ cycloalkenyl, cycloalkyl-substituted $\text{C}_1\text{-C}_3$ alkyl, $\text{C}_5\text{-C}_8$ cycloalkenyl-substituted $\text{C}_1\text{-C}_3$ alkyl or phenyl-substituted $\text{C}_1\text{-C}_3$ alkyl;

R^{10} is hydrogen or $\text{C}_1\text{-C}_3$ alkyl;

25 R^{11} is hydrogen, $\text{C}_1\text{-C}_{10}$ alkyl, $\text{C}_3\text{-C}_{10}$ alkenyl, phenyl, cycloalkyl, $\text{C}_5\text{-C}_8$ cycloalkenyl, cycloalkyl-substituted $\text{C}_1\text{-C}_3$ alkyl, $\text{C}_5\text{-C}_8$ cycloalkenyl-substituted $\text{C}_1\text{-C}_3$ alkyl, phenyl-substituted $\text{C}_1\text{-C}_3$ alkyl or

or

35 R^{10} and R^{11} are each CH_2 which together with N form a 4 to 6 membered heterocyclic ring;

E is

45 wherein:

R^{12} is $\text{C}_1\text{-C}_3$ alkyl substituted methylene,

R^{13} is $\text{C}_1\text{-C}_{10}$ alkyl;

D is OR^{14} or $\text{NR}^{15}\text{R}^{16}$;

50 wherein:

R^{14} is hydrogen, $\text{C}_1\text{-C}_{10}$ alkyl, $\text{C}_2\text{-C}_{10}$ alkenyl, cycloalkyl, $\text{C}_5\text{-C}_8$ cycloalkenyl, cycloalkyl-substituted $\text{C}_1\text{-C}_3$ alkyl, $\text{C}_5\text{-C}_8$ cycloalkenyl-substituted $\text{C}_1\text{-C}_3$ alkyl, or phenyl-substituted $\text{C}_1\text{-C}_3$ alkyl;

R^{15} is hydrogen, $\text{C}_1\text{-C}_{10}$ alkyl, $\text{C}_3\text{-C}_{10}$ alkenyl, phenyl, phenyl-substituted $\text{C}_1\text{-C}_3$ alkyl, cycloalkyl, $\text{C}_5\text{-C}_8$ cycloalkenyl, cycloalkyl-substituted $\text{C}_1\text{-C}_3$ alkyl or $\text{C}_5\text{-C}_8$ cycloalkenyl-substituted $\text{C}_1\text{-C}_3$ alkyl;

55 R^{16} is hydrogen or $\text{C}_1\text{-C}_3$ alkyl; or

R^{15} and R^{16} are each CH_2 which together with N form a 4 to 6 membered heterocyclic ring;

Y is OR^{17} or $\text{NR}^{18}\text{R}^{19}$;

wherein:

R¹⁷ is hydrogen, C₁-C₁₀ alkyl, C₂-C₁₀ alkenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl, or phenyl-substituted C₁-C₃ alkyl;

R¹⁸ is hydrogen or C₁-C₃ alkyl;

R¹⁹ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, phenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl, or phenyl-substituted C₁-C₃ alkyl; or

R¹⁸ and R¹⁹ are each CH₂ which together with N form a 4 to 6 membered heterocyclic ring;

n is 0-4;

q is 1-4;

m is 1-4;

or pharmaceutically acceptable salts thereof.

Another aspect of the present invention provides a method for using an effective amount of the compounds of the instant invention to treat constipation, nausea or vomiting induced by the use of opiates in a patient.

Another aspect of the present invention provides a method for treating the symptoms of idiopathic constipation or irritable bowel syndrome.

Another aspect of the instant invention provides pharmaceutical formulations comprising an effective amount of a compound of the instant invention in combination with a pharmaceutically acceptable excipient.

The term "C₁-C₅ alkyl", as used herein, represents a branched or linear alkyl group having from one to five carbon atoms. Typical C₁-C₅ alkyl groups include methyl, ethyl, *n*-propyl, *iso*-propyl, butyl, *iso*-butyl, *sec*-butyl, *tert*-butyl, pentyl and the like. Other such terms represent straight chain or branched alkyl groups of the specified number of carbon atoms, eg. "C₁-C₃ alkyl" represents methyl, ethyl, *n*-propyl, and isopropyl.

The terms "C₂-C₆ alkenyl", "C₂-C₁₀ alkenyl" and "C₃-C₁₀ alkenyl" refer to groups containing 2 to 6, 2 to 10, and 3 to 10 carbon atoms respectively and one double bond. The group can be branched or straight chain. Examples of such groups include 2-propenyl (-CH₂-CH=CH₂), 1-butenyl (-CH=CHCH₂CH₃) and the like.

The term "cycloalkyl" represents C₃-C₈ cycloalkyl groups such as cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl and cyclooctyl. "Substituted C₅-C₆ cycloalkyl" includes cycloalkyl groups substituted with C₁-C₃ alkyl, C₁-C₃ alkoxy or halo.

The term "cycloalkyl-substituted C₁-C₃ alkyl" represents a linear C₁-C₃ alkyl group substituted at a terminal carbon with a C₃-C₈ cycloalkyl group. Typical cycloalkyl-substituted alkyl groups include cyclohexylmethyl, cyclohexylethyl, cyclopentylethyl, cyclopentylpropyl and the like.

The term "C₅-C₈ cycloalkenyl" represents an olefinically unsaturated cyclic ring having five to eight carbon atoms.

The term "phenylalkyl" represents a linear C₁-C₃ alkyl chain substituted at a terminal carbon with a substituted or unsubstituted benzene ring. Typical phenylalkyl groups include phenylmethyl, phenylethyl and 3-(4-methylphenyl)propyl.

The term "phenyl" includes a benzene ring as well as a benzene ring substituted with one or two C₁-C₂ alkyl groups.

The "4 to 6-membered N-containing heterocyclic ring" referred to herein includes aromatic and nonaromatic rings such as pyrroles and piperidines.

While all of the compounds of the present invention are useful peripheral opioid antagonists, certain of the present compounds are preferred for that use. Preferred compounds of Formula I are those in which R¹ is hydrogen, R² is methyl; R³ is cyclohexyl, cyclohexylmethyl, phenyl or benzyl; n is 1 or 2; A is OH or NH(CH₂)_xC(O)W where x is 1 to 3; and W is OR⁹, NHR¹¹ or -OR¹²-O-C(O)R¹³; wherein R⁹ is hydrogen, C₁-C₅ alkyl, benzyl, or substituted-cyclohexyl; R¹¹ is hydrogen or C₁-C₅ alkyl; R¹² is C₁-C₃ alkyl substituted methylene; and R¹³ is C₁-C₃ alkyl.

Certain of the compounds of the instant invention can serve as intermediates in the preparation of other compounds of the invention. Compounds which are preferred are those in Formula I in which R¹ is hydrogen or CH₃; R² is CH₃; R³ is cyclohexyl, cyclohexylmethyl, benzyl, or phenyl; A is OH, methoxy or ethoxy; and n is 1 or 2.

The piperidines of the invention as illustrated in Formula I can occur as the *trans* and *cis* stereo-chemical isomers by virtue of the substituents at the 3- and 4-positions of the piperidine ring. The term "*trans*" as used herein refers to R² in position 3 being on the opposite side from the methyl group in position 4, whereas in the "*cis*" isomer R² and the 4-methyl are on the same side of the ring. In the most preferred compounds of the present invention, the group R² at the 3-position is situated on the opposite side of the ring, i.e., *trans* to the methyl group in the 4-position and on the same side of the ring, i.e., *Zusammen* or *Z*, relative to the higher priority phenyl group at the 4-position. These *trans* or *Z*-isomers can exist as the 3*R*,4*R*-isomer as shown in Formula II

5

10

15

or the 3S,4S-isomer of Formula III

20

25

30

II

III

35

40

The terms "R" and "S" are used herein as commonly used in organic chemistry to denote specific configuration of a chiral center. The term "R" refers to "right" and refers that configuration of a chiral center with a clockwise relationship of group priorities (highest to second lowest) when viewed along the bond toward the lowest priority group. The term "S" or "left" refers to that configuration of a chiral center with a counterclockwise relationship of group priorities (highest to second lowest) when viewed along the bond toward the lowest priority group. The priority of groups is based upon their atomic number (heaviest isotope first). A partial list of priorities and a discussion of stereochemistry is contained in the book: *The Vocabulary of Organic Chemistry*, Orchin, et al., John Wiley and Sons Inc., publishers, page 126, which is incorporated herein by reference.

The preferred compounds of the present invention are those of Formula I in which the configuration of substituents on the piperidine ring is 3R and 4R.

45

When R³ is not hydrogen, the carbon atom attached to R³ is asymmetric. As such, this class of compounds can further exist as the individual R or S stereoisomers at this chiral center, or the racemic mixture of the isomers, and all are contemplated within the scope of the present invention. Preferably, a substantially pure stereoisomer of the compounds of this invention is used, i.e., an isomer in which the configuration at the chiral center is R or S, i.e., those compounds in which the configuration at the three chiral centers is preferably 3R, 4R, S or 3R, 4R, R.

50

Furthermore, other asymmetric carbons can be introduced into the molecule depending on the structure of A. As such, these classes of compounds can exist as the individual R or S stereoisomers at these chiral centers, or the racemic mixture of the isomers, and all are contemplated as within the scope of the present invention.

Preferred compounds of the instant invention include the following:

55

U-OCH₂CH₃; U-OH; G-OH; U-NHCH₂C(O)NHCH₃; U-NHCH₂C(O)NH₂; G-NHCH₂C(O)NHCH₃; U-NHCH₂C(O)NHCH₂CH₃; G-NH(CH₂)₃C(O)OCH₂CH₃; G-NHCH₂C(O)OH; M-NHCH₂C(O)NH₂; M-NH(CH₂)₂C(O)OCH₂(C₆H₅); X-OCH₂CH₃; X-OH; X-NH(CH₂)₂CH₃; Z-NH(CH₂)₃C(O)OCH₂CH₃; X-NHCH₂C(O)OH; Z-NH(CH₂)₂N(CH₃)₂; Z-NH(CH₂)₂C(O)NHCH₂CH₃; X-OCH₂(C₆H₅); X-N(CH₃)₂; Z-NH(CH₂)₃C(O)NHCH₃; Z-NH(CH₂)₃C(O)NH₂; Z-NH(CH₂)₃C(O)-NHCH₂CH₃; X-OCH₂C(O)OCH₃; X-OCH₂C(O)NHCH₃; and X-N(CH₃)CH₂C(O)CH₂CH₃; in which:

U represents

G represents

M represents

Z represents

X represents

wherein:

Q represents trans-3,4-dimethyl

Particularly preferred compounds of the instant invention include the following:

Z-OH; Z-NH(CH₂)₂C(O)OH; G-NH(CH₂)₂C(O)NH₂; G-NH(CH₂)₂C(O)NHCH₃; G-NHCH₂C(O)NH₂; G-NHCH₂C(O)NHCH₂CH₃; G-NH(CH₂)₃C(O)NHCH₃; G-NH(CH₂)₂C(O)OH; G-NH(CH₂)₃C(O)OH; X-NH₂; X-NHCH(CH₃)₂; X-OCH₂CH(CH₃)₂; X-OCH₂C₆H₅; X-OH; X-O(CH₂)₄CH₃; X-O-(4-methoxycyclohexyl); X-OCH(CH₃)OC(O)CH₃; X-OCH₂C(O)NHCH₂(C₆H₅); M-NHCH₂C(O)OH; M-NH(CH₂)₂C(O)OH; M-NH(CH₂)₂C(O)NH₂; U-NHCH₂C(O)OCH₂CH₃; and U-NHCH₂C(O)OH; wherein Z, G, X and U are as defined above.

The compounds of the instant invention can be named in several ways. For example the compound with the structure IIa

can be named trans-4-(3-hydroxyphenyl)-3,4-A-phenyl-1-piperidine butanoic acid, ethyl ester or ethyl-trans-4-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]-2-phenylbutanoate.

The piperidines of this invention form pharmaceutically acceptable acid addition salts with a wide variety of inorganic and organic acids. Typical acids used include sulfuric, hydrochloric, hydrobromic, phosphoric, hypophosphoric, hydroiodic, sulfamic, citric, acetic, maleic, malic, succinic, tartaric, cinnamic, benzoic, ascorbic, mandelic, p-toluenesulfonic, benzenesulfonic, methanesulfonic, trifluoroacetic, hippuric and the like.

The compounds of the present invention can be prepared by a variety of procedures well known to those of ordinary skill in the art. The 3-substituted-4-methyl-4-(3-hydroxy-or alkanoyloxyphenyl)piperidine derivatives employed as starting materials in the synthesis of the instant compounds can be prepared by the general procedure taught by Zimmerman in U.S. Patent No. 4,115,400 (1978), and Zimmerman *et al.* in U.S. Patent No. 4,891,379 (1990) both incorporated herein by reference. The starting material for the synthesis of the compounds of the present invention, (3R,4R)-4-(3-hydroxyphenyl)-3,4-dimethylpiperidine, can be prepared by the procedure of Barnett in U.S. Patent 4,581,456, herein incorporated by reference, but adjusted as described in such patent so that the β -stereochemistry is preferred. This process is depicted in Scheme 1, wherein R^{20} is C_1 - C_3 alkyl, R^{21} is C_1 - C_6 alkyl, R^{22} is C_1 - C_4 alkyl, R^{23} and R^{24} independently are C_1 - C_3 alkyl or, when taken together with the nitrogen atom to which they are attached, form piperidine, piperazine, N-methylpiperazine, morpholine or pyrrolidine, and J is halogen, preferably chlorine or bromine.

Scheme 1

The first step of the above-described process involves the formation of the 3-alkoxyphenyllithium reagent by reacting 3-alkoxybromobenzene with an alkyl lithium reagent. This reaction is typically performed under inert conditions and in the presence of a suitable non-reactive solvent such as dry diethyl ether or preferably dry tetrahydrofuran. Preferred alkyl lithium reagents used in this process are *n*-butyllithium, and especially *sec*-butyllithium. Generally, approximately an equimolar to slight excess of alkyl lithium reagent is added to the reaction mixture. The reaction is conducted at a temperature between about $-20^\circ C$ and about $-100^\circ C$, more preferably from about $-50^\circ C$ to about $-55^\circ C$.

Once the 3-alkoxyphenyllithium reagent has formed, approximately an equimolar quantity of a 1-alkyl-4-piperidone is added to the mixture while maintaining the temperature between $-20^\circ C$ and $-100^\circ C$. The reaction is typically complete after about 1 to 24 hours. At this point, the reaction mixture is allowed to gradually warm to room temperature. The product is isolated by the addition to the reaction mixture of a saturated sodium chloride solution in order to quench any residual lithium reagent. The organic layer is separated and further purified if desired to provide the appropriate 1-alkyl-4-(3-alkoxyphenyl)piperidinol derivative.

The dehydration of the 4-phenylpiperidinol prepared above is accomplished with a strong acid according to well known procedures. While dehydration occurs in various amounts with any one of several strong acids such as hydrochloric acid, hydrobromic acid, and the like, dehydration is preferably conducted with phosphoric acid, or especially p-toluenesulfonic acid in toluene or benzene. This reaction is typically conducted under reflux conditions, more generally from about 50°C to about 150°C. The product thus formed is generally isolated by basifying an acidic aqueous solution of the salt form of the product and extracting the aqueous solution with a suitable water immiscible solvents. The resulting residue following evaporation can then be further purified if desired.

The 1-alkyl-4-methyl-4-(3-alkoxyphenyl)tetrahydropyridine derivatives are prepared by a metallocenamine alkylation. This reaction is preferably conducted with *n*-butyllithium in tetrahydrofuran (THF) under an inert atmosphere, such as nitrogen or argon. Generally, a slight excess of *n*-butyllithium is added to a stirring solution of the 1-alkyl-4-(3-alkoxyphenyl)-tetrahydropyridine in THF cooled to a temperature in the range of from about -50°C to about 0°C, more preferably from about -20°C to about -10°C. This mixture is stirred for approximately 10 to 30 minutes followed by the addition of approximately from 1.0 to 1.5 equivalents of methyl halide to the solution while maintaining the temperature of the reaction mixture below 0°C. After about 5 to 60 minutes, water is added to the reaction mixture and the organic phase is collected. The product can be purified according to standard procedures, but the crude product is preferably purified by either distilling it under vacuum or slurrying it in a mixture of hexane:ethyl acetate (65:35, v:v) and silica gel for about two hours. According to the latter procedure, the product is then isolated by filtration followed by evaporating the filtrate under reduced pressure.

The next step in the process involves the application of the Mannich reaction of aminomethylation to non-conjugated, endocyclic enamines. This reaction is preferably carried out by combining from about 1.2 to 2.0 equivalents of aqueous formaldehyde and about 1.3 to 2.0 equivalents of a secondary amine $\text{NHR}^{23}\text{R}^{24}$ in a suitable solvent. While water is the preferred solvent, other non-nucleophilic solvents such as acetone and acetonitrile can also be employed in this reaction. The pH of this solution is adjusted to approximately 3.0-4.0 with an acid which provides a non-nucleophilic anion. Examples of such acids include sulfuric acid, the sulfonic acids such as methanesulfonic acid and p-toluenesulfonic acid, phosphoric acid, and tetrafluoroboric acid. The preferred acid is sulfuric acid. To this solution is added one equivalent of a 1-alkyl-4-methyl-4-(3-alkoxyphenyl)tetrahydropyridine, typically dissolved in aqueous sulfuric acid, and the pH of the solution is readjusted with the non-nucleophilic acid or a secondary amine as defined above. The pH should be maintained in the range of from about 1.0 to 5.0 with a pH of about 3.0 to 3.5 being preferred during the reaction. The reaction is substantially complete after about 1 to 4 hours, more typically about 2 hours, when conducted at a temperature in the range of from about 50°C to about 80°C, more preferably at about 70°C. The reaction is next cooled to approximately 30°C and added to a sodium hydroxide solution. This solution is extracted with a water immiscible organic solvent, such as hexane or ethyl acetate, and the organic phase, following thorough washing with water to remove any residual formaldehyde, is evaporated to dryness under reduced pressure.

The next step of the process involves the catalytic hydrogenation of the 1-alkyl-4-methyl-4-(3-alkoxyphenyl)-3-tetrahydropyridinemethanamine prepared above to the corresponding trans-1-alkyl-3,4-dimethyl-4-(3-alkoxyphenyl)piperidine. This reaction actually occurs in two steps. The first step is the hydrogenolysis reaction wherein the exo C-N bond is reductively cleaved to generate the 3-methyltetrahydropyridine. In the second step, the 2,3-double bond in the tetrahydropyridine ring is reduced to afford the desired piperidine ring.

Reduction of the enamine double bond introduced the crucial relative stereochemistry at the 3 and 4 carbon atoms of the piperidine ring. The reduction does not occur with complete stereoselectivity. The catalysts employed in the process are chosen from among the various palladium and preferably platinum catalysts.

The catalytic hydrogenation step of the process is preferably conducted in an acidic reaction medium. Suitable solvents for use in the process include the alcohols, such as methanol or ethanol, as well as ethyl acetate, tetrahydrofuran, toluene, hexane, and the like.

Proper stereochemical outcome has been found to be dependent on the quantity of catalyst employed. The quantity of catalyst required to produce the desired stereochemical result is dependent upon the purity of the starting materials in regard to the presence or absence of various catalyst poisons.

The hydrogen pressure in the reaction vessel is not critical but can be in the range of from about 5 to 200 psi. Concentration of the starting material by volume is preferably around 20 ml. of liquid per gram of starting material, although an increased or decreased concentration of the starting material can also be employed. Under the conditions specified herein, the length of time for the catalytic hydrogenation is not critical because of the inability for over-reduction of the molecule. While the reaction can continue for up to 24 hours or longer, it is not necessary to continue the reduction conditions after the uptake of the theoretical two moles of hydrogen. The product is isolated by filtering the reaction mixture for example through infusorial earth, and evaporating the filtrate to dryness under reduced pressure. Further purification of the product thus isolated is not necessary and preferably the diastereomeric mixture is carried directly on to the following reaction.

The alkyl substituent is next removed from the 1-position of the piperidine ring by standard dealkylation procedures. Preferably, a chloroformate derivative, especially the vinyl or phenyl derivatives, are employed and removed with acid. Next, the alkoxy compound prepared above is dealkylated to the corresponding phenol. This reaction is generally car-

ried out by reacting the compound in a 48% aqueous hydrobromic acid solution. This reaction is substantially complete after about 30 minutes to 24 hours when conducted at a temperature between 50°C to about 150°C, more preferably at the reflux temperature of the reaction mixture. The mixture is then worked up by cooling the solution, followed by neutralization with base to an approximate pH of 8. This aqueous solution is extracted with a water immiscible organic solvent. The residue following evaporation of the organic phase is then preferably used directly in the following step.

The compounds employed as starting materials to the compounds of the invention can also be prepared by brominating the 1-alkyl-4-methyl-4-(3-alkoxyphenyl)-3-tetrahydropyridinemethanamine prepared above at the 3-position, lithiating the bromo compound thus prepared, and reacting the lithiated intermediate with a methylhalide such as methyl bromide to provide the corresponding 1-alkyl-3,4-dimethyl-4-(3-alkoxyphenyl)tetrahydropyridinemethanamine. This compound is then reduced and converted to the starting material as indicated above.

As noted above, the compounds of the present invention can exist as the individual stereoisomers. Preferably reaction conditions are adjusted as disclosed by Barnett (supra) or as set forth in Example 1 hereof to be substantially stereoselective and provide a racemic mixture of essentially two enantiomers. These enantiomers can then be resolved. The preferred procedure employed to prepare the resolved starting materials used in the synthesis of these compounds includes treating a racemic mixture of alkyl-3,4-dimethyl-4-(3-alkoxyphenyl)piperidine with either (+)- or (-)-di-benzoyl tartaric acid to provide the resolved intermediate. This compound is dealkylated at the 1-position with vinyl chloroformate and finally converted to the desired 4-(3-hydroxyphenyl)piperidine isomer. This reaction scheme is represented in the following Scheme 2:

Scheme 2

wherein R^{20} and R^{22} are as defined above.

As will be understood by those skilled in the art, the individual enantiomers of the invention can also be isolated with either (+) or (-) dibenzoyl tartaric acid, as desired, from the corresponding racemic mixture of the compounds of the invention. Preferably the (+)-trans enantiomer is obtained.

Although the (+)-trans-3,4 stereoisomer is preferred, all of the possible stereoisomers of the instant compounds are within the contemplated scope of the present invention. Racemic mixtures of the stereoisomers as well as the substantially pure stereoisomers are within the scope of the invention. The term "substantially pure" is used herein to refer to at least about 90 mole percent, more preferably at least about 95 mole percent and most preferably at least about 98 mole percent of the desired stereoisomer is present compound to other possible stereoisomers.

Intermediates and compounds with the instant invention can be prepared by reacting a 3,4-alkyl-substituted-4-(3-hydroxyphenyl)piperidine with a compound of the formula $\text{LCH}_2(\text{CH}_2)_{n-1}\text{CHR}^3\text{C}(\text{O})\text{E}$ where L is a leaving group such as chlorine, bromine or iodine, E is a carboxylic acid, ester or amide, and R^3 and n are as defined hereinabove. Preferably L is chlorine and the reaction is carried out in the presence of a base to alkylate the piperidine nitrogen. For example 4-chloro-2-cyclohexylbutanoic acid, ethyl ester can be contacted with (3R,4R)-4-(3-hydroxyphenyl)-3,4-dimethylpiperidine to provide 4-[(3R,4R)-4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidine]butanoic acid, ethyl ester.

Although the ester of the carboxylic acid is preferred, the free acid itself or an amide of the carboxylic acid can be used. In alternative synthesis, the substituted piperidine can be contacted with an α -methylene alkyl ester to alkylate the piperidine nitrogen. For example, 2-methylene-3-phenylpropanoic acid, ethyl ester can be contacted with a desired piperidine to provide 2-benzyl-3-piperidinepropanoic acid ethyl ester.

Another synthetic route can involve the reaction of a substituted piperidine with a haloalkylnitrile. The nitrile group of the resulting piperidine alkyl nitrile can be hydrolyzed to the corresponding carboxylic acid.

With each of the synthetic routes, the resulting ester or carboxylic acid can be reacted with an amine or alcohol to provide modified chemical structures. In the preparation of amides, the piperidine-carboxylic acid or -carboxylic acid ester is reacted with an amine in the presence of a coupling agent such as dicyclohexylcarbodiimide, boric acid, borane-trimethylamine, and the like. Esters can be prepared by contacting the piperidine-carboxylic acid with the appropriate alcohol in the presence of a coupling agent such as p-toluenesulfonic acid, boron trifluoride etherate or N,N'-carbonyldiimidazole. Alternatively, the piperidine-carboxylic acid chloride can be prepared using a reagent such as thionyl chloride, phosphorus trichloride, phosphorus pentachloride and the like. This acyl chloride can be reacted with the appropriate amine or alcohol to provide the corresponding amide or ester. Examples of such reactions are provided in the appended examples.

As used in the instant examples, the following terms have the meanings indicated. "Hobt" refers to 1-hydroxybenzotriazole hydrate. "THF" refers to tetrahydrofuran. "DMF" refers to dimethylformamide. "TEA" refers to triethylamine. "DCC" refers to dicyclohexylcarbodiimide.

The column chromatography procedure used involved gravitational flow with Allied Fischer silica gel (70-150 mesh). Gradient solvent procedures were employed using the solvent systems specified in the particular example. The gradient procedure involved starting the indicated solvent system and incrementally changing the solvent mixture until the indicated final solvent system was obtained. Fractions containing product were evaporated generally under reduced vacuum to provide product.

Preparative liquid chromatography was performed with the Waters Prep LC/500 apparatus using dual silica prep pack cartridges. Gradient solvent systems were employed as listed in the particular example.

Optical rotations were determined using methanol as the solvent.

For those examples indicated, purification of the specified compound was accomplished by preparative, centrifugal, thin layer chromatography on a Harrison Model 7924A Chromatron using Analtech silica gel GF rotors. The plate thickness and solvent system employed are indicated in the particular example.

The hydrochloride salt of the particular compound was prepared by placing the free base into ethyl ether. While stirring this ether solution, a solution of HCl in ethyl ether was added dropwise until the base-containing solution became acidic. A precipitate formed which was filtered and dried to provide the corresponding hydrochloride salt of the free base.

In the instant Examples Q-, X-, Z-, M-, G-, and U- are used to represent the moieties indicated hereinabove.

Example 1

Preparation of (+)-(3R,4R)-4-(3-hydroxyphenyl)-3,4-dimethylpiperidine [Q-H].

3-Bromophenol was combined with an equal molar amount of 2-bromopropane in ethanol and in the presence of potassium carbonate to provide 3-bromo-isopropoxybenzene.

The 3-bromo-i-propoxybenzene (200 g, 0.08703 mol) was combined with THF (540 ml) under nitrogen and cooled to about -75°C. n-Butyl lithium (565 ml, 0.8306 mol) was added dropwise while maintaining the mixture at less than -70°C. After 2 hours 1,3-dimethyl-4-piperidone (106.7 g, 0.8389 mol) was added while maintaining the temperature of the mixture between -80°C and -70°C. After stirring 2 hours at -70°C., the reaction mixture was then added to 6N HCl (280 ml) while maintaining the temperature at 20-25°C. The pH was adjusted to 1 with 12 N HCl. The aqueous layer containing product was separated and heptane (320 ml) was added along with 50% NaOH (48 ml, pH = 13-14) and the resulting mixture allowed to stand overnight. The mixture was heated to 45-50°C and the upper layer was separated.

The remaining aqueous layer was extracted with heptane (320 ml) at 45-50°C. The combined organic fractions were washed with de-ionized water (120 ml) at 45-50°C. The resulting organic layer was vacuum distilled at a pot temperature of about 55°C at 100 mmHg. Crystallization from heptane and drying provided 151.8 g of 3-(3-i-propoxyphenyl)-1,3-dimethyl-4-hydroxypiperidine. Melting point 75.0-76.0°C.

5 This 4-hydroxypiperidine (463 g, 1.758 mol) was combined with ethyl acetate (2275 ml) under nitrogen. The solution was cooled to 0-5°C and ethyl chloroformate (205 ml, 2.144 mol) was added while maintaining the temperature below 15°C. The reaction mixture was stirred for an additional 3 hours at room temperature. The mixture was then added to 5N NaOH (750 ml) with stirring (pH = 12-13) the organic layer was separated and washed with de-ionized water. Solvent was removed by evaporation at 50°C to provide 591 g of a viscous oil.

10 This viscous oil (284.8 g) was dissolved in ethanol (2.6 L) and warmed to 55°C under nitrogen. (+)-Di-p-toluoyl-D-tartaric acid, monohydrate was added and the solution heated to reflux. After stirring overnight at room temperature, the mixture was cooled to 0-5°C before filtering. The filter cake was washed with cold ethanol, air dried for 30 minutes then vacuum dried at 45-50°C. Recrystallization from ethanol provided 201.7 g of product with a melting point of 153.5-155°C (dec). This material had a ratio of isomers by proton NMR of 97:3.

15 Product prepared in this manner (411.7 g) was added to heptane (1200 ml) and 2N NaOH (550 ml) over a 15 minute period. pH of the mixture was adjusted to about 13 with 50% NaOH and stirred until all solid had dissolved. The layers were separated and the organic layer washed with 1N NaOH (275 ml), de-ionized water (275 ml) and the saturated aqueous sodium chloride (210 ml). The organic fraction was dried over 175 g of sodium sulfate, filtered and washed with heptane (125 ml). The solvent was removed by evaporation to provide 189.4 g of a colorless viscous oil.

20 $[\alpha]_{589}$ of -6.92° (c = 1.01, methanol).

This viscous oil product (50.0 g) and decalin (250 ml) were heated at 190-195°C for 19 hr under nitrogen while removing the ethanol formed by distillation. The solution was cooled to 15-20°C under nitrogen and 1N HCl (155 ml) was added with stirring. The aqueous fraction was separated and extracted with heptane (2 x 30 ml). The pH of the aqueous layer was adjusted to about 13 by adding 50% NaOH and extracted with heptane. 36.5 g of a yellow-orange liquid were removed from the organic layer.

25 $[\alpha]_{589}$ = -67.24°.

This yellow-orange liquid product (19.6 g) was combined with THF (175 ml) and cooled to -15°C to -20°C under nitrogen. n-Butyl lithium (70.0 ml) was added with stirring over about 0.5 hr while maintaining the internal temperature at about -10°C to about -20°C. The mixture was stirred for another 0.5 hr at -10°C to -15°C and then cooled to -45 to -50°C. Dimethyl sulfate (7.7 ml) was added slowly over 20-30 minutes while maintaining the temperature between -45°C and -50°C. The mixture was then stirred for an additional 30 minutes at about -50°C. This reaction mixture was then added slowly to a dilute solution of aqueous ammonium hydroxide (15.5 ml aqueous ammonium hydroxide solution plus 55 ml de-ionized water) at 0-5°C. The mixture was warmed to 20-25°C over 30-45 minutes and stirred an additional 2 hrs at 20-25°C. The organic layer was recovered and washed with de-ionized water followed by removal of solvent by evaporation to provide 21.44 g of 4-(3-i-propoxyphenyl)-1,4,5-trimethyl-2,3-dehydropiperidine as an orange liquid.

30 This dehydropiperidine (21.2 g) and methanol (195 ml) were combined under nitrogen and cooled to 0-5°C. Sodium borohydride (4.2 g) was added slowly while maintaining the temperature below 15°C. The reaction mixture was stirred at room temperature for 3 hrs. Acetone (21 ml) was added to the reaction mixture and stirred for 5 minutes. A saturated solution of sodium bicarbonate (25 ml) was added and the mixture stirred for 5 minutes. The alcohols were removed by evaporation at 50°C. De-ionized water (95 ml) and ethyl acetate (95 ml) were added and the resulting mixture stirred to form a solution. Phases were separated and the aqueous phase extracted with ethyl acetate (20 ml). Combined organic fractions were washed with de-ionized water (95 ml) and the solvent removed by evaporation at 50°C to provide (+)-4-(3-i-propoxyphenyl)-1,3,4-trimethylpiperidine as a yellow liquid (20.5 g).

35 Anhydrous ethanol (75 ml) and (+)-di-p-toluoyl-D-tartaric acid, monohydrate (12.48 g) were combined and heated to 55-60°C under nitrogen. An ethanol solution of the trimethyl piperidine (8.07 g in 20 ml) was added while heating to reflux (about 75°C). De-ionized water (6 ml) was added to obtain a clear homogeneous solution which was stirred at reflux for 0.5 hr. Cooling, filtering, washing with cold ethanol, and drying provided 15.07 g of (+)-4-(3-i-propoxyphenyl)-1,3,4-trimethylpiperidine • (+)-di-p-toluoyl-D-tartaric acid salt with a melting point 145-147.5°C (dec).

40 Toluene (1400 ml) and 2N NaOH (700 ml) were combined and cooled to 15-20°C. The piperidine-tartaric salt (395.0 grams) was added with stirring at 15-25°C and stirring continued until all solids had dissolved. The layers were separated and the organic fraction washed with 1N NaOH (385 ml) and de-ionized water (385 ml). The organic fraction was filtered and the solvent removed by evaporation (50°C) to provide 164.8 g of the free base as an oil.

$[\alpha]_{589}$ = +74.18°.

45 To a mixture of the free base (+)-4-(3-i-propoxyphenyl)-1,3,4-trimethyl-piperidine (25 g) in toluene (160 ml) at 80-90°C was added phenylchloroformate (17.2 g). The mixture was heated at reflux (110°C) for 2 hrs and then cooled to 45-50°C. NaOH (5 ml, 50%, in 40 ml water) was added and the mixture stirred with cooling to room temperature. After 30 minutes the layers were separated and the organic layer washed with a 1:1 mixture of methanol and 1N HCl, a 1:1 mixture of methanol and 1N NaOH, and then washed with water. Evaporation of the solvent provided 33.9 g of the phenyl carbamate as an oil.

EP 0 506 478 B1

The phenyl carbamate (13.95 g), 48% HBr (17.4 ml) and glacial acetic acid (4.7 ml) were combined and refluxed for 18 hours. The solution was cooled to room temperature; water (50 ml) was added; and the solution was extracted 3 times with t-butyl methyl ether (30 ml aliquots). The pH of the aqueous phase was adjusted to 8.5-8.8 with 50% NaOH solution. Methanol (15 ml) was added and the pH adjusted to 10.5 with the 50% NaOH solution. The mixture was stirred for 1.5 hours, cooled to 5°C and filtered to provide the white solid (+)-trans-3,4-dimethyl-4-(3-hydroxyphenyl)piperidine (6.86 g).

$[\alpha]_{365} = +380.37$ (methanol).

Example 2

Preparation of 3-phenyl-2-(ethoxycarbonyl)-1-propene.

N-butyl lithium (201 ml of 1.6 M) was added dropwise to diisopropyl amine (45 ml) in dry tetrahydrofuran (870 ml) at -78°C. After stirring at this temperature for 0.5 hours ethyl-2-benzylacetoacetate (39.6 g, 0.18 M) in THF (250 ml) was added dropwise at 0°C. After stirring for 20 minutes, paraformaldehyde (35.42 g) was added at room temperature followed by stirring for one hour and refluxing for 4 hours. The reaction mixture was filtered and the liquid evaporated to dryness. The residue was dissolved in a mixture of $\text{KHCO}_3/\text{H}_2\text{O}$ and methylene chloride (1:1) and stirred for 0.5 hours. The layers were separated and the methylene chloride layer was dried over K_2CO_3 and then evaporated to dryness to yield 46.4 g of named product. This product was purified with a Prep-500 chromatograph eluting with hexane to 5% ethyl acetate/hexane gradient to yield 30 g of a clear liquid.

ms (fd) = 190 M^+

Example 3

Preparation of 3-cyclohexyl-2-(ethoxycarbonyl)-1-propene.

A. Ethyl-2-benzylacetoacetate (50 g, 0.227 M) was dissolved in ethanol (435 ml) and combined with 5% $\text{Rh}/\text{Al}_2\text{O}_3$ (15 g) and stirred at room temperature overnight under hydrogen pressure (60 psi). The mixture was filtered and solvent removed under vacuum. The residue was diluted with ethyl acetate and washed with water. The organic layer was dried over K_2CO_3 and the solvent removed under vacuum to provide 49 g of ethyl-2-aceto-3-cyclohexylpropanoate.

B. Ethyl-2-acetohexylpropanoate (20 g) was contacted with N-butyllithium (101 mL 1.6 M), diisopropylamine (23 mL in dry THF, 440 mL) and paraformaldehyde (18 g) as in Example 2 to provide 19 g of crude product which was purified by bulb-to-bulb distillation at 130°C, 0.1 mmHg to provide 10 g of the named product as a clear liquid.

ms (fd) = 196 M^+

Example 4

A. Preparation of trans-4-(3-hydroxyphenyl)-3,4-dimethyl- α -(phenylmethyl)-1-piperidinepropanoic acid, ethyl ester hydrochloride. $[\text{Z}-\text{OCH}_2\text{CH}_3 \cdot \text{HCl}]$.

Trans-(+)-3,4-dimethyl-4-(3-hydroxyphenyl)piperidine (6.0 g, 29 mmole) and 3-phenyl-2-(ethoxycarbonyl)-1-propene (6.1 g) were dissolved in methanol (300 ml) and stirred at room temperature under nitrogen. During the 10 day reaction time, the mixture was evaporated two times and rediluted with methanol on days 5 and 9. On day 10 the mixture was evaporated to dryness to provide 13 g of solid which was passed through a silica column eluting with hexane to ethyl acetate gradient providing 11.4 g of purified product.

B. Preparation of 4-(3-hydroxyphenyl)-3,4-dimethyl- α -(phenylmethyl)-1-piperidinepropanoic acid monohydrate. [Z-OH \cdot H₂O].

To 1.0 g of the product from 4A was added dioxane (60 ml) and 6 N HCl (30 ml). The mixture was heated to reflux for two hours, cooled and the solvent removed under vacuum. The residue was rediluted with water and the pH adjusted to 9.8 with ammonium hydroxide. The desired acid was extracted with 3:1 butanol/toluene solution. The solvent was removed and the residue was passed through a silica column eluting with a mixture of methanol and ethyl acetate (20:80, v:v). The resulting material was slurried in ethyl ether, and filtered to give 650 mg of product having m.p. 120-131°C.

Example 5

A. Preparation of 3-[3,4-dimethyl-4-(3-hydroxyphenyl)-1-piperidiny]-2-(cyclohexylmethyl)propanoic acid ethyl ester hydrochloride. [M-OCH₂CH₃ \cdot HCl].

The procedure of Example 4A was used with trans-(\pm)-3,4-dimethyl-4-(3-hydroxyphenyl)piperidine (4.0 g) and 2-(ethoxycarbonyl)-3-phenyl-1-propene (4.61 g). The solvent was removed under vacuum and the residue diluted with ethyl acetate and water. The pH was adjusted to 9.8 with 1N NaOH and the mixture was extracted with ethyl acetate. This organic layer was dried over K₂CO₃. The solvent removed to yield 4.3 g. The HCl-salt was prepared having a melting point 101-111°C.

B. Preparation of 3-[3,4-dimethyl-4-(3-hydroxyphenyl)-1-piperidiny]-2-(cyclohexylmethyl)propanoic acid monohydrate. [M-OH \cdot H₂O].

2.88 g of compound from preparation 5A was added to dioxane (75 ml) and 6N HCl (75 ml) and allowed to reflux with stirring for five hours. The solvent was removed under reduced pressure and the residue was taken into H₂O. The pH of the water was adjusted to 9.8 with ammonium hydroxide. The solution was extracted with a mixture of butanol and toluene (3:1, v:v) and dried over magnesium sulfate. The solvent was removed by vacuum to yield 2.6 g of solid. This material was purified by column chromatography eluting with a 1:1 ethyl acetate-methanol mixture. After removal of solvent, the material was triterated with ethyl ether and filtered to give 640 mg of product.

Example 6

Preparation of ethyl-2-phenyl-4-chlorobutanoate.

Diisopropylamine (2.71 ml, 1.1 eq) was added to dry THF (10 ml) and cooled to -78°C. N-butyllithium (11.01 ml of 1.6 Molar, 1.1 eq) was added dropwise. The mixture was stirred at -78°C for 30 minutes and ethyl-2-phenylacetate (2.9 g, 1.0 eq) was dissolved in dry THF (20 ml) and the solution added dropwise to the reaction mixture. The mixture was stirred at -78°C for 0.25 hour and then allowed to warm to -30°C and stirred for an additional 0.25 hour. 1,3-Dimethyl-3,4,5,6-tetrahydro-2(1H)-pyrimidinone (DMPU) (2.13 ml, 1.0 eq) was dissolved in dry THF (20 ml) and added dropwise to the mixture. The resulting mixture was maintained at -30°C for ten minutes. This mixture was then cannulated under N₂ pressure to a flask which had been charged with ethyl ether (100 ml) and 1-bromo-2-chloroethane (7.3 ml, 5.0 eq) at -10°C. The mixture was stirred for three hours at -10°C to -5°C. The mixture was cooled to -30°C and quenched with a saturated ammonium chloride solution. The mixture was extracted with ethyl ether which was then dried over K₂CO₃. The solvent was stripped to provide 3.2 g of product which distilled at 70-71°C under 0.01 mmHg.

Example 7

Preparation of ethyl-2-cyclohexyl-4-chlorobutanoate.

Diisopropylamine (2.71 ml, 1.1 eq.) was added to dry THF (10 ml) and cooled to -78°C. N-Butyllithium (11.01 ml of 1.6 Molar solution, 1.0 eq.) was added and the mixture stirred at -78°C for 0.5 hour. To this mixture was then added dropwise a solution of ethyl-2-cyclohexylacetate (3.0 g, 1.0 eq.) in THF (20 ml) at -78°C and stirred for 0.5 hour. DMPU (2.13 ml, 1.0 eq.) in THF (20 ml) was added dropwise and allowed to stir at -78°C for 10 minutes. To this mixture was added 1-bromo-2-chloroethane (1.46 ml, 1.0 eq.) in THF (10 ml) and the mixture stirred at -5°C for 15 minutes. The mixture was then warmed to room temperature and stirred for 1.0 hour. The mixture was cooled to 0°C, quenched with saturated ammonium chloride solution, extracted with ethyl ether and the ether layer was washed three times with water. The organic layer was separated, dried over K₂CO₃ and the solvent removed to provide 3.6 g of product. This was fractionally distilled to provide 3.0 g of product Boiling Point 66°-70°C at 0.05 mmHg.

A. Preparation of trans-4-[(3-Hydroxyphenyl)-3,4-dimethyl-1-piperidine]-2-phenyl butanoic acid, ethyl ester hydrochloride. [U-OCH₂CH₃ • HCl].

Ethyl-4-chloro-2-phenylbutanoate (2.43 g), trans-(+)-3,4-dimethyl-4-(3-hydroxyphenyl)piperidine [Q-OH] (2.0 g), NaHCO₃ (905 mg), NaI (1.53 g), and dimethylformamide (DMF) (120 ml) were combined and heated to reflux for two hours. The mixture was cooled and evaporated to dryness. The solid was taken into H₂O and the pH adjusted to 9.8 with 1N NaOH. This mixture was extracted with ethyl acetate and the organic layer dried over K₂CO₃. The solvent was removed under vacuum to provide 5 g of crude product. This product was subjected to column chromatography eluting with ethyl acetate to provide 4.0 g of material. This material was converted to the HCl salt.

Example 11

Preparation of 2-[[4-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]-1-oxo-2-phenylbutyl]amino]acetic acid ethyl ester monohydrochloride. [U-NHCH₂C(O)OCH₂CH₃·HCl].

The following materials were combined in dry DMF (75 ml): substituted-butanoic acid prepared as in Example 8B (1.5 g, 4 mmole), glycine ethyl ester (558 mg), triethylamine (404 mg), Hobt (540 mg), DCC (824 mg). The above materials were mixed together at room temperature under nitrogen and stirred for three days with the DCC added after solubilization of the solids. The reaction was then filtered and evaporated to dryness. The residue was solubilized in ethyl acetate, washed one time with water and dried over K₂CO₃. The solvent was evaporated to provide 800 mg of solid product. The product was subjected to column chromatography eluting with a gradient of ethyl acetate to a 9:1 (v:v) ethyl acetate-methanol mixture to provide 400 mg of a semisolid material. This was converted to HCl salt to provide 270 mg of white solid.

Preparation of 2-[[4-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidiny]-2-phenyl-1-oxobutyl]amino]ethanoic acid monohydrate. $[U-NHCH_2C(O)OH \cdot H_2O]$.

Ethyl ester prepared as in Example 11 (1.6 g, 3.5 mmole) and lithium hydroxide (440 mg) were combined in 60 ml of a mixture of tetrahydrofuran, methanol, and water (v:v:v, 3:1:1) and stirred at room temperature. After three hours the mixture was poured into 100 ml of a 10 weight percent aqueous solution of HCl. The mixture was then extracted with a butanol/toluene (v:v, 3:1) solution. The organic layer was backwashed one time with water, dried over K_2CO_3 and the solvent evaporated under vacuum to yield 1.51 g of solid product. The product was subjected to column chromatography eluting with a gradient of ethyl acetate/methanol (9:1, v:v) to ethyl acetate/methanol (1:1, v:v) under nitrogen pressure providing 360 mg of product as a white solid.

Example 34

Preparation of 3-[[2-(cyclohexylmethyl)-1-oxo-3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]propyl]amino]propanoic acid phenylmethyl ester monohydrochloride. [M-NH(CH₂)₂C(O)OCH₂(C₆H₅)·HCl].

Propanoic acid product of the Example 5B procedure (809 mg), β-alanine benzyl ester-p-tosylate (760 mg), Hobt (293 mg), TEA (0.364 ml), DCC (447 mg), and DMF (80 ml) were combined and stirred at room temperature for three days. The mixture was stripped to dryness and diluted with butanol-toluene (v:v, 3:1) and water. The pH was adjusted to 9.8 with 1N NaOH and the organic layer was separated. The organic layer was dried over K₂CO₃ and the solvent removed. The residue was diluted with ethyl acetate and passed through a column of silica gel. The recovered product was converted to the HCl salt and triterated with ethyl ether and filtered to provide 600 mg of white solid.

m.p. = 80-90°C.

Preparation of 3-[[2-(cyclohexylmethyl)-3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]-1-oxopropyl]amino]propanoic acid ethyl ester monohydrochloride. $[M-NH(CH_2)_2C(O)OCH_2CH_3 \cdot HCl]$.

Propanoic acid product of the procedure of Example 5B (1 g), β -alanine ethyl ester hydrochloride (400 mg) triethylamine (263 mg) Hobt (351 mg), were combined in dry dimethylformamide (75 ml) and then DCC (536 mg) was added. These reactants were mixed together at room temperature under nitrogen for 3 days. The reaction mixture was filtered and evaporated to dryness. The residue was dissolved in ethyl acetate, which was washed one time with water, dried over K_2CO_3 and evaporated to provide 1.74 g of material. This material was subjected to column chromatography eluting with a gradient of ethyl acetate/hexane (v:v, 1:1) to ethyl acetate. Removal of the solvent provided 520 mg of solid which was converted to the HCl salt to provide 270 mg of solid.

m.p. = 86-89°C.

Example 44

Preparation of 2-[[3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]-1-oxo-2-(phenylmethyl)propyl]amino]acetic acid monohydrate. [X-OH • H₂O].

Acetic acid ester prepared as in Example 43 (HCl salt) (600 mg) was dissolved in ethanol (20 ml) and 1N NaOH (2.6 ml) was added. The mixture allowed to stir at room temperature for two hours and the solvent removed under reduced pressure. The residue was taken into H₂O and the pH adjusted to 7 with 1N HCl. The H₂O was removed under vacuum and the residue dried. The residue was slurried in ethanol, filtered, and the solvent removed to yield 500 mg of material. This material was passed through a silica column eluting with ethyl acetate/methanol (3:2). The solvent was removed to yield 450 mg of material. This was recrystallized from an ethyl acetate/methanol (1:1) mixture to provide 378 mg of final product as a white solid. m.p. = 161-165°C.

Example 57

Preparation of 2-[[3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidiny]-1-oxo-2-(phenylmethyl)propyl]amino]propanoic acid monohydrate. $[Z-NH(CH_2)_2C(O)OH \cdot H_2O]$.

The product of Example 56 (700 mg) was contacted with 5% Pd/C and H_2 at 60 psi overnight. The mixture was filtered and the solvent was removed. The residue was diluted with a water/ethanol mixture. The pH was adjusted to 7.0 with 1N NaOH. This solvent was removed and the residue slurried in ethanol and filtered to remove NaCl. The solvent was removed from the filtrate and the residue passed through silica gel column eluting with ethyl acetate/ethanol (v:v, 1:1). The solvent was removed and the solid was dried to provide 366 mg of product.
m.p. = 98-100°C.

Analysis for $C_{26}H_{34}N_2O_4 \cdot H_2O$

Example 58

Preparation of [[3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]-1-oxo-2-(phenylmethyl)propyl]amino]propanoic acid ethyl ester monohydrochloride. $[Z-NH(CH_2)_2C(O)OCH_2CH_3 \cdot HCl]$.

Propanoic acid prepared as in Example 4B (1.65 g), β -alanine ethyl ester:HCl (691 mg), TEA (454 mg), Hobt (608 mg) and dried DMF (75 ml) were combined followed by DCC (928 mg) and stirred 64 hours at room temperature under nitrogen. The mixture was evaporated to dryness and the residue partitioned between ethyl acetate and water. The layers were separated with the organic layer being washed with water, dried over K_2CO_3 and evaporated to dryness to provide 2.0 g of material. This material was passed through a silica column eluting with a gradient of hexane/ethyl acetate (v:v, 1:1) to ethyl acetate providing 1.26 g of product. This product was converted to the HCl salt and dried to provide 1.3 g of white solid.

m.p. = 119-124°C

ms (fd) = 466 M^+

Example 59

Preparation of N-(methyl)-3-[[3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]-2-(phenylmethyl)-1-oxopropyl]amino]propanamide monohydrochloride. $[Z-NH(CH_2)_2C(O)NHCH_3 \cdot HCl]$.

Propionic acid ethyl ester prepared as in Example 58 (450 mg), methylamine (15 ml, 40% in water), and methanol (10 ml) were combined and stirred at room temperature for three hours. The reaction was evaporated to dryness. The residue was partitioned between butanol/toluene (v:v, 3:1) and water. The H_2O layer was adjusted to a pH of 9.8 with 1N NaOH and the layers separated. The organic layer was washed one time with water, dried over K_2CO_3 , and evaporated to provide 440 mg of material. This material was subjected to column chromatography eluting with a gradient of ethyl acetate to ethyl acetate/methanol (v:v, 9:1) providing 344 mg of product.

ms (fd) = 451 M^+ , 452 $M^+ + 1$

The product was converted to the HCl salt and dried to provide 260 mg of white solid.

m.p. = 95-99°C (foam):

Example 76

Preparation of $\text{H}_2\text{NCH}_2\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$.

A. t-butoxycarbonyl glycine (3 g), ethylamine-HCl (1.39 g), TEA (1.72 g), Hobt (2.3 g) and dry DMF (100 ml) were combined and DCC (3.5 g) was added. The mixture was stirred for three days at room temperature under nitrogen then filtered and evaporated to dryness. 6 g of material was recovered. This material was subjected to column chromatography eluting with a gradient of ethyl acetate to ethyl acetate/methanol (1:1) providing 4.01 g of $(\text{CH}_3)_3\text{COC}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$.

ms (fd) = 202 M^+

B. Product from 76A above (4 g) and 6N HCl (150 ml) were mixed and stirred overnight at room temperature. Acetonitrile was added and the solution was evaporated to dryness. The resulting solid was slurried in ethyl ether, filtered and dried to provide 1.84 g. of $\text{H}_2\text{NCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3 \cdot \text{HCl}$.

ms (fd) = 102 M^+

C. The product from 76B above (1.80 g), t-butoxycarbonylglycine (2.28 g), TEA (1.31 g), Hobt (1.76 g) and dry DMF (150 ml) were combined and DCC (2.68 g) was added. The mixture was stirred for three days at room temperature under nitrogen, filtered and evaporated to dryness. The residue was dissolved in ethyl acetate which was washed one time with water, dried over K_2CO_3 and evaporated to provide 2.15 g of material. This material was subjected to column chromatography eluting with a gradient of ethyl acetate/methanol (v:v, 9:1) to ethyl acetate/methanol (v:v,

EP 0 506 478 B1

1:1) providing 920 mg of $(\text{CH}_3)_3\text{COC}(\text{O})\text{-NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$.
ms (fd) = 259 M^+

D. The product from 76C above (900 mg) and 6N HCl (40 ml) were combined as in Example 74 B to provide 700 mg of product as the HCl salt.

ms (fd) = 160 M^+

Example 77

Preparation of $\text{X-NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$.

The procedure of Example 76A was followed with the carboxylic acid prepared from the procedure of Example 4B (Z-OH) (774 mg), amine-HCl product from Example 76 D (458 mg), TEA (293 mg), Hobt (391 mg), dry DMF (50 ml) and DCC (597 mg). 1.74 g of material was recovered. This material was subjected to column chromatography eluting with a gradient of ethyl acetate to ethyl acetate/methanol (1:1) providing 510 mg of product.

ms (fd) = 508 M^+ , 509 $\text{M}^+ + 1$

This product was converted to HCl salt to provide 400 mg of solid.

m.p. = 110-115°C

Example 78

Preparation of $\text{W-OCH}_2\text{CH}_3$.

A. Trans-(+)- 1,3,4-trimethyl-4-(3-methoxyphenyl)piperidine (3.48 g) vinyl chloroformate (2.73 ml) and proton sponge (7.13 g) were mixed in 1, 2-dichloroethane (150 ml), refluxed for 2 hours, cooled to room temperature and evaporated to dryness. The resulting residue was dissolved in ethyl ether, washed two times with cold 1 N HCl, one time with water, dried over K_2CO_3 , and evaporated to dryness to provide 4.51 g of the carbamate product. The carbamate was mixed with ethanol (100 ml) and ethanol/gaseous HCl (100 ml) and refluxed for 1.5 hours. The mixture was cooled to room temperature and evaporated to dryness. The residue was dissolved in 1 N NaOH and ethyl ether added. The ether layer was separated, washed with water, dried over K_2CO_3 and evaporated to provide 3.0 grams of material. This was vacuum distilled in a bulb-to-bulb distillation apparatus at 220°C and 0.1 mmHg to provide 2.86 g of trans-3,4-dimethyl-4-(3-methoxyphenyl)-piperidine.

EP 0 506 478 B1

B. The product from 78A above (2.86 g) and 3-phenyl 2-(ethoxycarbonyl)-1-propene prepared as in Example 2 (2.72 g) and methanol (50 ml) were mixed and stirred at room temperature under nitrogen for 10 days. The mixture was evaporated 2 times and rediluted with methanol on day 5 and day 9. On day 10 the mixture was evaporated to dryness to provide 5.46 g of material which was subjected to column chromatography eluting with a gradient of hexane to ethyl acetate. Removal of solvent provided 4.05 g of product.

ms (fd) = 409 M⁺, 410 M⁺+1

A portion of the product was converted to the HCl salt.

m.p. = 61°-64°C

Example 94

Preparation of X-OCH(CH₃)OC(O)CH₃ • hydrochloride.

XOH prepared as in Example 44 (463 mg) and K₂CO₃ (1.83 g) were heated at 70°C for ten minutes. The mixture was then cooled to room temperature and 1-bromoethylacetate (894 mg) in DMF (20 ml) was added dropwise at room temperature. After stirring one hour at room temperature, the solution was filtered and evaporated. The residue was partitioned between ethyl acetate and water with the water layer pH adjusted to 9.8 with 1N NaOH. The layers were separated and the ethyl acetate layer washed one time with water, dried over K₂CO₃ and evaporated to provide 620 mg of a dark oil. This material was passed over a silica column eluting with a gradient of hexane/ethyl acetate (v:v, 1:1) to ethyl acetate. Removal of solvent provided 330 mg of a dark oil which was placed over the chromatron using a 2 mm plate and eluting with a gradient of hexane/ethyl acetate (v:v, 1:1) to ethyl acetate. The resulting solution was stirred over decolorizing charcoal and the solvent removed to provide 200 mg of a tan oil having a mass spec of 511 (M⁺ + 1). This product was converted to HCl salt and dried at 60°C to provide 190 mg of a tan solid.

m.p. = 94°-98°C (with decomposition)

Example 97

Preparation of (+)(3R,4R)-trans-[[2-[[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidiny]methyl]-1-oxo-3-phenylpropyl]amino]acetic acid monohydrate [(+)-X-OH • H₂O of Example 85].

A. Preparation of (+)-trans-(3R,4R)-3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidiny]-2-phenylmethylpropanoic acid, ethyl ester.

The procedure of Example 4A was followed with (+)-trans-(3R,4R)-4-(3-hydroxyphenyl)-3,4-dimethylpiperidine (4.4 g, 20 mmole) and 2-ethoxycarbonyl-3-phenylpropene (4.5 g) in methanol (225 ml). The reactants were stirred at room temperature under nitrogen for ten days with the reaction mixture then evaporated to dryness to provide 8.8 g of a viscous oil. This material was passed through a Prep-500 liquid chromatography eluting with a gradient of hexane to 10% ethyl acetate/hexane. 8.0 g of a white foam was recovered.

ms (fd) = 395 M⁺

B. Preparation of (+)-trans-(3R,4R)-3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidiny]-2-phenylmethyl propanoic acid. [(+)-Z-OH].

The product from 97A above (6 g, 15 mmole) and lithium hydroxide (1.89 g) were combined in a mixture of THF/methanol/water (192 ml/64 ml/64 ml) and stirred at room temperature for three hours. The mixture was then poured into 1N HCl and stirred for five minutes. The aqueous solution was then adjusted to a pH of 9.8 with triethylamine and extracted with n-butanol/toluene (3:1). The organic layer was dried over MgSO₄ and evaporated to provide 7.14 g of a white foam. This material was subjected to column chromatography eluting with a gradient of ethyl acetate/methanol (9:1) to ethyl acetate/methanol (1:1). Removal of solvent provided 3.98 g of a white powder.

ms (fd) = 367 M⁺, 368 M⁺+1

C. Preparation of (+)-X-OCH₂CH(CH₃)₂.

The carboxylic acid product (+)-Z-OH from 97B above (2.45 g, 6.7 mmole), the amine from Example 96 (1.82 g), triethylamine (604 mg), Hobt (806 mg), DCC (1.23 g) were combined in dry DMF (180 ml) and stirred at room temperature under nitrogen for 72 hours. The mixture was then filtered and evaporated to dryness. The residue was partitioned between ethyl acetate and water. The pH of the water layer was adjusted to 9.8 with 1N NaOH and the layers were separated. The organic layer was dried over K₂CO₃ and then evaporated to provide 3.21 g of an orange foam. This material was passed over a silica column eluting with a gradient of hexane/ethyl acetate (9:1) to ethyl acetate. The removal of solvent provided 2.31 g of a white foam.

ms (fd) = 481 M⁺

D. Separation of diastereomers.

4.36 g of an isomeric mix prepared as in Example 97C above was passed over a Prep-500 liquid chromatograph using a gradient of hexane/triethylamine (99:1) to hexane/ethyl acetate/triethylamine (75:24:1). An 8 liter forerun was discarded and 300 ml fractions were then collected.

Fractions 38-45 contained 99% of a first peak by HPLC. Removal of solvent provided 580 mg of a white foam (Diastereomer A). [(+)-(3R,4R)-X-OCH₂CH(CH₃)₂].

Example 98

Preparation of (-)-(3S,4S)-trans-[[2-[[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]methyl]-1-oxo-3-phenylpropyl]amino]acetic acid [(-)X-OH of Example 85].

A. Preparation of (-)-trans-(3S,4S)-3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]-2-phenylmethyl-propanoic acid ethyl ester.

The procedure of Example 97A was followed using (-)-trans (3S,4S)-4-(3-hydroxyphenyl)-3,4-dimethylpiperidine (10 g, 48 mmole) and 2-ethoxycarbonyl-3-phenylpropene (10.2 g) in methanol (500 ml). 18.31 g of a tan viscous oil was recovered. This was passed over a PREP-500 liquid chromatograph eluting with a gradient of hexane to 10% ethyl acetate/hexane to providing 17.40 g of a white foam. ms (fd) = 395 M⁺

B. Preparation of (-)-(3S,4S)-3-[4-(3-hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]-2-phenylmethyl-propanoic acid.

The procedure of Example 97B was followed with the product from Example 97A (12.5 g, 32 mmole), lithium hydroxide (3.98 g) in THF/methanol/water (400 ml/130 ml/130 ml). 10.75 g of a tan foam was recovered. This was subjected to column chromatography eluting with a gradient of ethyl acetate/methanol (9:1) to ethyl acetate/methanol (1:1). Removal of the solvent provided 8.97 g of a white powder.

ms (fd) = 368 M⁺+1

C. Preparation of (-)-X-OCH₂-CH(CH₃)₂.

The procedure of Example 97C was followed with the product from Example 98B (5.12 g, 14 mmole), amine from Example 96 (4.54 g), triethylamine (1.5 g), Hobt (2.0 g) DCC (3.04 g) in dry DMF (400 ml). 7.81 g of an orange foam was recovered. This was passed over a silica column eluting with a gradient of hexane/ethyl acetate (9:1) to hexane/ethyl acetate (1:1). Removal of the solvent provided 5.5 g of a white foam.

ms (fd) = 481 M⁺

D. Separation of diastereomers.

The procedure of Example 97D was followed using 4.20 g of the (-)-isomeric mix of Example 98C.

Fractions 33-40 showed 98% of a first peak by HPLC. Removal of solvent provided 435 mg of a white foam (diastereomer A).

ms (fd) = 481 M⁺

The instant compounds are useful in blocking peripheral opioid receptors and preventing peripherally opiate induced side effects. These side effects induced by the administration of an opiate such as morphine to a mammal can include constipation, nausea, and vomiting. These compounds can also be useful in the treatment of irritable bowel syndrome and idiopathic constipation. While not wishing to be bound by the theory, it is believed that the instant compounds act as opioid antagonists and bind to peripheral opioid receptors outside of the brain. The compounds do not substantially pass through the blood-brain barrier and therefore do not mitigate the opioid's effect on central (brain and spinal cord) opioid receptors. Consequently, these compounds should also be substantially free of other centrally mediated effects.

In order to determine *in vivo* opioid receptor antagonism, the mouse writhing analgesis test was used. Test compounds were measured for their ability to block morphine-induced analgesia.

Five CF-1 male mice (Charles River, Portage, MI), weighing approximately 20 g after being fasted overnight, were observed simultaneously for the writhing response. The writhing response was defined as a contraction of the abdominal musculature, followed by the extension of the hind limbs, and was induced by the intraperitoneal administration of 0.6% acetic acid in a volume of 1 ml/100 g body weight. The observation period was 10 min. in duration, beginning 5 min. after injection of acetic acid. The percent inhibition of writhing was calculated from the average number of writhes in the control (non-drug) group. Each data point is the mean (± standard error) for five mice. The ED₅₀ was defined as the dose of agonist that inhibited mean writhing by 50%. The AD₅₀ was defined as the dose of antagonist that reduced the inhibition of writhing produced by a 1.25 mg/kg dose of morphine sulfate to 50%. Each mouse was only used once. All drugs were administered subcutaneously (1 ml/100 g bwt) 20 min. before the injection of acetic acid.

Determinations of peripheral opioid activity were conducted. Mice maintained (6 mice/cage) on 0.01 M saccharin water with 1 g/l morphine sulfate for a minimum of 10 days with mice averaging 3.0⁺ g water/mouse/day for at least three days are used as subjects. The morphine water was removed 45 min. prior to injection with the proposed opioid antagonist. Initial testing consisted of 5 mice/dose of compound. The antagonist was given by the subcutaneous or oral, route of administration, and the mice were placed in 11-14" x 4 7/12 I.D. clear plastic cylinders with white paper towels used for a floor.

The mice were then monitored visually for 30 minutes post-injection for the presence of jumping and of diarrhea. Jumping was scored as positive if at least one jump occurred in 30 min. Diarrhea was scored as positive when feces were moist enough to stain the white paper at the base of the cylinder. After 30 minutes of testing, the mice were placed back in original cages, put back on morphine water, and not tested again for 48 hrs. Lower doses of the antagonist compounds were tested until threshold doses for diarrhea were determined. Diarrhea is a peripherally mediated sign of precipitated opiate abstinence.

The extent of the effect on peripheral activity compared to central activity of the present compounds can be determined by comparing the AD₅₀ for the mouse writhing test with the ED₅₀ for the mouse diarrhea test. The higher the ratio, the greater the relative antagonism of the peripheral opioid receptors by a particular compound. This ratio for each compound is provided in Table I.

 *** I. V. administration because of lack of sample

The compounds of the present invention have been found to display excellent activity in an opioid receptor binding assay which measures the affinity of the compounds to bind to mu receptors. This assay was conducted by the following procedure.

Male Sprague Dawley rats for mu site experiments were sacrificed via decapitation and the brains were removed. The brain tissue, rat whole brain minus cerebellum for mu was homogenized in a Teflon and glass tissue homogenizer. A supernatant I, pellet IV, fraction was frozen in a nitrogen freezer at 1.33 g/ml concentration and stored for not longer than five weeks prior to use. Pellets were rehydrated with physiological buffer prior to use.

For mu sites increasing concentrations of experimental compound, [0.1 to 1000 nanomolar (nM)], Krebs-Hepes buffer pH 7.4, and tritiated naloxone (0.5 nM) (³H ligand) were combined in polystyrene tubes at room temperature. The reaction was initiated by the addition of the resuspended tissue which had been preincubated at 37°C. for 20 minutes. The reaction mixture was incubated in a 37°C. water bath for 20 minutes. The reaction was terminated by rapid filtration, (Brandel Cell Harvester), through Whatman GF/B glass filters that had been presoaked in Krebs-Hepes buffer pH 7.4. The filters were then washed 2x with 5 ml of ice cold Krebs-Hepes buffer pH 7.4. Washed filters were placed in scintillation vials and 10 ml RedySolv, (Brandel), was added and samples counted in a Searle D-300 beta counter. Means and standard error statistics were calculated for triplicate experimental determinations in certain cases. The incubation time for the reaction mixture was 20 minutes at 37°C.

Ki values were calculated using a minitab statistical program according to the following formula:

$$K_i = \frac{IC_{50}}{1 + \frac{\text{concentration of } ^3\text{H ligand}}{K_D}}$$

wherein IC₅₀ is the concentration at which 50% of the ³H ligand is displaced by the test compounds and K_D is the dissociation constant for the ³H ligand at the receptor site. K_D can be determined as described by Bennett "Methods in Binding Studies", Neurotransmitter Receptor Binding, Yamamura, et al., ed., p. 57-90, Raven Press, N.Y. (1978) incorporated herein by reference.

The results of the evaluation of certain compounds of the present invention in the opioid receptor binding assay are set forth below in Table II. In the Table, column 1 sets forth the Example Number of the compound evaluated, column 2 the Ki value in nanomolar (nM) at the mu receptor and columns 3 and 4 the percent displacement by the test compound at the indicated concentration, ie., 10 nm or 100 nm.

(1) In nanomoles

(2) % displacement

While it is possible to administer a compound of the invention directly without any formulation, the compounds are preferably employed in the form of a pharmaceutical formulation comprising a pharmaceutically acceptable excipient and at least one compound of the invention. Such compositions contain from about 0.1 percent by weight to about 90.0 percent by weight of a present compound. As such, the present invention also provides pharmaceutical formulations comprising a compound of the invention and a pharmaceutically acceptable excipient therefor.

In making the compositions of the present invention, the active ingredient is usually mixed an excipient which can be a carrier, or a diluent or be diluted by a carrier, or enclosed within a carrier which can be in the form of a capsule, sachet, paper or other container. When the carrier serves as a diluent, it can be a solid, semi-solid or liquid material which acts as a vehicle, excipient or medium for the active ingredient. Thus, the composition can be in the form of tablets, pills, powders, lozenges, sachets, cachets, elixirs, emulsions, solutions, syrups, suspensions, aerosols (as a solid or in a liquid medium), and soft and hard gelatin capsules.

Examples of suitable excipients, include lactose, dextrose, sucrose, sorbitol, mannitol, starches, gum acacia, calcium phosphate, alginates, calcium silicate, microcrystalline cellulose, polyvinylpyrrolidone, cellulose, tragacanth, gelatin, syrup, methyl cellulose, methyl- and propylhydroxybenzoates, talc, magnesium stearate, water, and mineral oil. The formulations can also include wetting agents, emulsifying and suspending agents, preserving agents, sweetening agents or flavoring agents. The formulations of the invention can be formulated so as to provide quick, sustained, or delayed release of the active ingredient after administration to the patient by employing procedures well known in the art.

For oral administration, a compound of this invention is preferably admixed with one or more excipient, and molded into tablets or enclosed in gelatin capsules.

The compositions are preferably formulated in a unit dosage form, each dosage containing from about 1 to about 500 mg more usually about 5 to 300 mg of the active ingredient. The term "unit dosage form" refers to physically discrete units suitable as unitary dosages for human subjects and other mammals, each unit containing a predetermined quantity of active material calculated to produce the desired therapeutic effect, in association with a suitable pharmaceutical excipient.

In order to more fully illustrate the operation of this invention, the following formulation examples are provided. The samples are illustrative only, and are not intended to limit the scope of the invention. The formulations may employ as active compounds any of the compounds of the present invention. Specific compounds are provided as illustrative with Z, G, X.

Formulation 1

Hard gelatin capsules are prepared using the following ingredients:

	Amount Per Capsule	Concentration by Weight (percent)
Z-NH(CH ₂) ₂ C(O)NH ₂	20 mg	10.0
starch dried	200 mg	43.0
magnesium stearate	10 mg	2.0
	<u>460 mg</u>	<u>100.0</u>

The above ingredients are mixed and filled into hard gelatin capsules in 460 mg quantities.

Formulation 2

Capsules each containing 20 mg of medicament are made as follows:

	Amount Per Capsule	Concentration by Weight (percent)
G-NH(CH ₂) ₂ C(O)NH ₂	20 mg	10.0
starch	89 mg	44.5
microcrystalline cellulose	89 mg	44.5
magnesium stearate	2 mg	1.0
	<u>200 mg</u>	<u>100.0 mg</u>

The active ingredient, cellulose, starch and magnesium stearate are blended, passed through a No. 45 mesh U.S. sieve

EP 0 506 478 B1

and filled into a hard gelatin capsule.

Formulation 3

Capsules each containing 100 mg of active ingredient are made as follows:

	Amount Per Capsule	Concentration by Weight (percent)
G-NH(CH ₂) ₃ C(O)NHCH ₃	100 mg	30.0
polyoxyethylene sorbitan monooleate	50 microg	0.02
starch powder	<u>250 mg</u>	<u>69.98</u>
	350.05 mg	100.00

The above ingredients are thoroughly mixed and placed in an empty gelatin capsule.

Formulation 4

Tablets each containing 10 mg of active ingredient are prepared as follows:

	Amount Per Tablet	Concentration by Weight (percent)
X-OCH ₂ CH(CH ₃) ₂	10 mg	10.0
starch	45 mg	45.0
microcrystalline cellulose	35 mg	35.0
polyvinylpyrrolidone (as 10% solution in water)	4 mg	4.0
sodium carboxymethyl starch	4.5 mg	4.5
magnesium stearate	0.5 mg	0.5
talc	1 mg	1.0
	<u>100 mg</u>	<u>100.0</u>

The active ingredient, starch and cellulose are passed through a No. 45 mesh U.S. sieve and mixed thoroughly. The solution of polyvinylpyrrolidone is mixed with the resultant powders which are then passed through a No. 14 mesh U.S. sieve. The granule so produced is dried at 50°-60°C and passed through a No. 18 mesh U.S. sieve. The sodium carboxymethyl starch, magnesium stearate and talc, previously passed through a No. 60 mesh U.S. sieve, are then added to the granule which after mixing, is compressed on a tablet machine to yield a tablet weighing 100 mg.

Formulation 5

A tablet formula may be prepared using the ingredients below:

EP 0 506 478 B1

	Amount Per Capsule	Concentration by Weight (percent)
X-O(CH ₂) ₄ CH ₃	250 mg	38.0
cellulose microcrystalline	400 mg	60.0
silicon dioxide fumed	10 mg	1.5
stearic acid	5 mg	0.5
	<u>665 mg</u>	<u>100.0</u>

The components are blended and compressed to form tablets each weighing 665 mg.

Formulation 6

Suspensions each containing 5 mg of medicament per 5 ml dose are made as follows:

	per 5 ml of suspension
M-NHCH ₂ C(O)OH	5 mg
sodium carboxymethyl cellulose	50 mg
syrup	1.25 ml
benzoic acid solution	0.10 ml
flavor	q.v.
color	q.v.
water	q.s. to 5 ml

The medicament is passed through a No. 45 mesh U.S. sieve and mixed with the sodium carboxymethylcellulose and syrup to form a smooth paste. The benzoic acid solution, flavor and color is diluted with some of the water and added to the paste with stirring. Sufficient water is then added to produce the required volume.

Formulation 7

An aerosol solution is prepared containing the following components:

	Concentration by Weight (percent)
U-NHCH ₂ C(O)OH	0.25
ethanol	29.75
Propellant 22 (chlorodifluoromethane)	<u>70.00</u>
	100.00

The active compound is mixed with ethanol and the mixture added to a portion of the Propellant 22, cooled to -30°C and transferred to a filling device. The required amount is then fed to a stainless steel container and diluted further with the remaining amount of propellant. The valve units are then fitted to the container.

Claims

1. A trans-3,4-isomer of a compound of Formula (I)

15 wherein:

R¹ is hydrogen or C₁-C₅ alkyl;

R² is hydrogen, C₁-C₅ alkyl or C₂-C₆ alkenyl;

20 R³ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, phenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl or phenyl-substituted C₁-C₃ alkyl;

A is OR⁴ or NR⁵R⁶;

wherein:

25 R⁴ is hydrogen, C₁-C₁₀ alkyl, C₂-C₁₀ alkenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl or phenyl-substituted C₁-C₃ alkyl;

R⁵ is hydrogen or C₁-C₃ alkyl;

30 R⁶ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, cycloalkyl, phenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl, phenyl-substituted C₁-C₃ alkyl, or (CH₂)ₓ-B; or R⁵ and R⁶ are each CH₂ which together with N form a 4- to 6-membered heterocyclic ring;

wherein:

B is

45 or NR⁷R⁸;

wherein:

R⁷ is hydrogen or C₁-C₃ alkyl;

R⁸ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, cycloalkyl-substituted C₁-C₃ alkyl, cycloalkyl, C₅-C₈ cycloalkenyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl, phenyl or phenyl-substituted C₁-C₃ alkyl; or

50 R⁷ and R⁸ are each CH₂ which together with N form a 4- to 6-membered heterocyclic ring;

W is OR⁹, NR¹⁰R¹¹, or OE;

wherein:

55 R⁹ is hydrogen, C₁-C₁₀ alkyl, C₂-C₁₀ alkenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl or phenyl-substituted C₁-C₃ alkyl;

R¹⁰ is hydrogen or C₁-C₃ alkyl;

R¹¹ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, phenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, phenyl-substituted C₁-C₃ alkyl, or

or

R¹⁰ and R¹¹ are each CH₂ which together with N form a 4- to 6-membered heterocyclic ring;

E is

wherein:

R¹² is C₁-C₃ alkyl substituted methylene,R¹³ is C₁-C₁₀ alkyl;D is OR¹⁴ or NR¹⁵R¹⁶;

wherein:

R¹⁴ is hydrogen, C₁-C₁₀ alkyl, C₂-C₁₀ alkenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, or C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl or phenyl-substituted C₁-C₃ alkyl;R¹⁵ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, phenyl, phenyl-substituted C₁-C₃ alkyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl or C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl;R¹⁶ is hydrogen or C₁-C₃ alkyl;R¹⁵ and R¹⁶ are each CH₂ which together with N form a 4- to 6-membered heterocyclic ring;Y is OR¹⁷ or NR¹⁸R¹⁹;

wherein:

R¹⁷ is hydrogen, C₁-C₁₀ alkyl, C₂-C₁₀ alkenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl, or phenyl-substituted C₁-C₃ alkyl;R¹⁸ is hydrogen or C₁-C₃ alkyl;R¹⁹ is hydrogen, C₁-C₁₀ alkyl, C₃-C₁₀ alkenyl, phenyl, cycloalkyl, C₅-C₈ cycloalkenyl, cycloalkyl-substituted C₁-C₃ alkyl, C₅-C₈ cycloalkenyl-substituted C₁-C₃ alkyl, or phenyl-substituted C₁-C₃ alkyl;R¹⁸ and R¹⁹ are each CH₂ which together with N form a 4- to 6-membered heterocyclic ring;

n is 0-4;

q is 1-4;

m is 1-4;

or a pharmaceutically acceptable salt thereof, wherein the term "cycloalkyl" represents C₃-C₈ cycloalkyl.

2. A compound of Formula (I) as claimed in Claim 1 wherein A is NR⁵R⁶ in which R⁵ is hydrogen and R⁶ is (CH₂)_q-B wherein q is 1 to 3 and B is -C(O)W.
3. A compound of Formula (I) as claimed in Claims 1 or 2 wherein W is OR⁹ and R⁹ is hydrogen, C₁-C₅ alkyl, phenyl-substituted C₁-C₂ alkyl, C₅-C₆ cycloalkyl, or C₅-C₆ cycloalkyl-substituted C₁-C₃ alkyl.
4. A compound of Formula (I) as claimed in any one of Claims 1 to 3 wherein the configuration at positions 3 and 4 of the piperidine ring is R.

5. A compound of Formula (I) as claimed in any one of Claims 1 to 4 selected from the group consisting of
- $\text{QCH}_2\text{CH}[\text{CH}_2(\text{C}_6\text{H}_5)]\text{C}(\text{O})\text{OH}$, $\text{QCH}_2\text{CH}_2\text{CH}(\text{C}_6\text{H}_5)\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{CH}_2$,
 $\text{QCH}_2\text{CH}_2\text{CH}(\text{C}_6\text{H}_5)\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{OH}$, $\text{Q-CH}_2\text{CH}_2\text{CH}(\text{C}_6\text{H}_5)\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{NHCH}_3$, $\text{Q-CH}_2\text{CH}_2\text{CH}(\text{C}_6\text{H}_5)\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$, $\text{G-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{NH}_2$, $\text{G-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{NHCH}_3$, $\text{G-NHCH}_2\text{C}(\text{O})\text{NH}_2$, $\text{G-NHCH}_2\text{C}(\text{O})\text{NHCH}_3$, $\text{G-NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$, $\text{G-NH}(\text{CH}_2)_3\text{C}(\text{O})\text{OCH}_2\text{CH}_3$, $\text{G-NH}(\text{CH}_2)_3\text{C}(\text{O})\text{NHCH}_3$, $\text{G-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{OH}$, $\text{G-NH}(\text{CH}_2)_3\text{C}(\text{O})\text{OH}$, $\text{QCH}_2\text{CH}[\text{CH}_2(\text{C}_6\text{H}_{11})]\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{OH}$,
 $\text{QCH}_2\text{CH}[\text{CH}_2(\text{C}_6\text{H}_{11})]\text{C}(\text{O})\text{NH}(\text{CH}_2)_2\text{C}(\text{O})\text{OH}$, $\text{QCH}_2\text{CH}[\text{CH}_2(\text{C}_6\text{H}_{11})]\text{C}(\text{O})\text{NH}(\text{CH}_2)_2\text{C}(\text{O})\text{NH}_2$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{CH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OH}$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{NH}_2$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{N}(\text{CH}_3)_2$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{NHCH}(\text{CH}_3)_2$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{CH}(\text{CH}_3)_2$, $\text{Z-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{OCH}_2(\text{C}_6\text{H}_5)$, $\text{Z-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{OH}$,
 $\text{Z-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$, $\text{Z-NH}(\text{CH}_2)_3\text{C}(\text{O})\text{NHCH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{OH}$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{C}(\text{O})\text{OCH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{O}(\text{CH}_2)_4\text{CH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{C}(\text{O})\text{NHCH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{O-(4-methoxycyclohexyl)}$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{C}(\text{O})\text{NHCH}_2(\text{C}_6\text{H}_5)$, and $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}(\text{CH}_3)\text{OC}(\text{O})\text{CH}_3$,
 wherein:

Q represents trans-3,4-dimethyl

G represents

and Z represents

and a pharmaceutically acceptable salt thereof.

6. A compound of Formula (I) as claimed in any one of Claims 1 to 5 selected from the group consisting of
 (3R,4R,S)-Z-NHCH₂C(O)OCH₂CH(CH₃)₂, (+)Z-NHCH₂C(O)OH, (-)Z-NHCH₂C(O)OH, (3R,4R,R)-
 ZNHCH₂C(O)OCH₂CH(CH₃)₂, (3S,4S,S)-ZNHCH₂C(O)OCH₂CH(CH₃)₂, (3S,4S,R)-ZNHCH₂C(O)OCH₂CH(CH₃)₂,
 (3R,4R)-ZNHCH₂C(O)NHCH₂(C₆H₅) and (3R,4R)-G-NH(CH₂)₃C(O)OH,
 or a pharmaceutically acceptable salt thereof.
7. [(2-[[4-(3-Hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]methyl]-1-oxo-3-phenylpropyl)amino]acetic acid 2-methylpropyl ester, or a pharmaceutically acceptable salt thereof.
8. The (+)-enantiomer of the compound claimed in Claim 7, or a pharmaceutically acceptable salt thereof.
9. A substantially pure stereoisomer of a compound of Formula (I) as claimed in any one of Claims 1 to 8 or a pharmaceutically acceptable salt thereof.
10. A pharmaceutical formulation comprising as an active ingredient a compound of Formula (I) as claimed in any one of Claims 1 to 9, or a pharmaceutically acceptable salt thereof, in association with one or more pharmaceutically acceptable excipients, carriers or diluents therefor.
11. A compound of Formula (I) as claimed in any one of Claims 1 to 9, or a pharmaceutically acceptable salt thereof, for use in treating irritable bowel syndrome; or for use in treating a peripheral effect of an opioid; or for use in treating constipation, nausea, or vomiting; or for use in blocking m_μ receptors in a mammal; or for use in treating idiopathic constipation.
12. A process for preparing a compound of Formula (I) as claimed in any one of Claims 1 to 9 which comprises

(A) reacting a compound of formula (II)

II

with a compound of formula

wherein L is a leaving group; E is a carboxylic acid, ester or amide group; optionally followed by esterification, alkylation, or amidation if necessary or desired; or

(B) resolving a racemic form of the compound of Formula (I) as claimed in any of Claims 1 to 9 so as to prepare a compound which is the (+)-enantiomer; or

(C) removing the protecting group J from a compound of the formula

so as to prepare a compound of Formula (I) wherein R^1 is hydrogen; or
 (D) reacting a compound of Formula (II) as described hereinabove, with a compound of the formula

or
 (E) reacting a compound of Formula (II) as described hereinabove, with a compound of the formula

or
 (F) hydrolyzing a compound of Formula III

so as to prepare a compound of Formula (I) wherein A is OH; or
 (G) reacting a compound of Formula IV

with an appropriate amine or alcohol if necessary or desired.

Patentansprüche

- 20 1. Trans-3,4-Isomer einer Verbindung der Formel (I)

worin:

40 R¹ Wasserstoff oder C₁-5-Alkyl ist,

R² Wasserstoff, C₁-5-Alkyl oder C₂-6-Alkenyl ist,

R³ Wasserstoff, C₁-10-Alkyl, C₃-10-Alkenyl, Phenyl, Cycloalkyl, C₅-8-Cycloalkenyl, Cycloalkyl-substituiertes C₁-3-Alkyl, C₅-8-Cycloalkenyl-substituiertes C₁-3-Alkyl oder Phenyl-substituiertes C₁-3-Alkyl ist,

A OR⁴ oder NR⁵R⁶ ist, wobei

45 R₄ Wasserstoff, C₁-10-Alkyl, C₂-10-Alkenyl, Cycloalkyl, C₅-8-Cycloalkenyl, Cycloalkyl-substituiertes C₁-3-Alkyl, C₅-8-Cycloalkenyl-substituiertes C₁-3-Alkyl oder Phenyl-substituiertes C₁-3-Alkyl ist,

R⁵ Wasserstoff oder C₁-3-Alkyl ist,

50 R⁶ Wasserstoff, C₁-10-Alkyl, C₃-10-Alkenyl, Cycloalkyl, Phenyl, Cycloalkyl-substituiertes C₁-3-Alkyl, C₅-8-Cycloalkenyl, C₅-8-Cycloalkenyl-substituiertes C₁-3-Alkyl, Phenyl-substituiertes C₁-3-Alkyl, oder (CH₂)q-B ist, oder

R⁵ und R⁶ jeweils CH₂ sind, die zusammen mit N einen heterocyclischen Ring mit 4 bis 6 Atomen bilden, wobei:

B

CO-W oder NR^7R^8 ist, wobei

R^7 Wasserstoff oder C_{1-3} -Alkyl ist,

R^8 Wasserstoff, C_{1-10} -Alkyl, C_{3-10} -Alkenyl, Cycloalkyl-substituiertes C_{1-3} -Alkyl, Cycloalkyl, C_{5-8} -Cycloalkenyl, C_{5-8} -Cycloalkenyl-substituiertes C_{1-3} -Alkyl, Phenyl oder Phenyl-substituiertes C_{1-3} -Alkyl ist, oder R^7 und R^8 jeweils CH_2 sind, die zusammen mit N einen heterocyclischen Ring mit 4 bis 6 Atomen bilden, W OR⁹, NR¹⁰R¹¹ oder OE ist, wobei:

R^9 Wasserstoff, C_{1-10} -Alkyl, C_{2-10} -Alkenyl, Cycloalkyl, C_{5-8} -Cycloalkenyl, Cycloalkyl-substituiertes C_{1-3} -Alkyl, C_{5-8} -Cycloalkenyl-substituiertes C_{1-3} -Alkyl oder Phenyl-substituiertes C_{1-3} -Alkyl ist,

R^{10} Wasserstoff oder C_{1-3} -Alkyl ist,

R^{11} Wasserstoff, C_{1-10} -Alkyl, C_{3-10} -Alkenyl, Phenyl, Cycloalkyl, C_{5-8} -Cycloalkenyl Cycloalkyl-substituiertes C_{1-3} -Alkyl, Phenyl-substituiertes C_{1-3} -Alkyl ist oder $(\text{CH}_2)_m\text{CO-Y}$ ist, oder

R^{10} und R^{11} jeweils CH_2 sind, die zusammen mit N einen heterocyclischen Ring mit 4 bis 6 Atomen bilden,

E $(\text{CH}_2)_m\text{CO-D}$,

oder $-\text{R}^{12}\text{-OCO-R}^{13}$ ist, wobei:

R^{12} C_{1-3} -Alkyl-substituiertes Methylen ist,

R^{13} C_{1-10} -Alkyl ist,

D OR¹⁴ oder NR¹⁵R¹⁶ ist, wobei:

R^{14} Wasserstoff, C_{1-10} -Alkyl, C_{2-10} -Alkenyl, Cycloalkyl, C_{5-8} -Cycloalkenyl, Cycloalkyl-substituiertes C_{1-3} -Alkyl oder C_{5-8} -Cycloalkenyl-substituiertes C_{1-3} -Alkyl oder Phenyl-substituiertes C_{1-3} -Alkyl ist,

R^{15} Wasserstoff, C_{1-10} -Alkyl, C_{3-10} -Alkenyl, Phenyl, Phenyl-substituiertes C_{1-3} -Alkyl, Cycloalkyl, C_{5-8} -Cycloalkenyl, Cycloalkyl-substituiertes C_{1-3} -Alkyl oder C_{5-8} -Cycloalkenyl-substituiertes C_{1-3} -Alkyl ist,

R^{16} Wasserstoff oder C_{1-3} -Alkyl ist, oder

R^{15} und R^{16} jeweils CH_2 sind, die zusammen mit N einen heterocyclischen Ring mit 4 bis 6 Atomen bilden,

Y OR⁷ oder NR¹⁸R¹⁹ ist, wobei:

R^{17} Wasserstoff, C_{1-10} -Alkyl, C_{2-10} -Alkenyl, Cycloalkyl, C_{5-8} -Cycloalkenyl, Cycloalkyl-substituiertes C_{1-3} -Alkyl, C_{5-8} -Cycloalkenyl-substituiertes C_{1-3} -Alkyl oder Phenyl-substituiertes C_{1-3} -Alkyl ist,

R^{18} Wasserstoff oder C_{1-3} -Alkyl ist,

R^{19} Wasserstoff, C_{1-10} -Alkyl, C_{3-10} -Alkenyl, Phenyl, Cycloalkyl, C_{5-8} -Cycloalkenyl, Cycloalkyl-substituiertes C_{1-3} -Alkyl, C_{5-8} -Cycloalkenyl-substituiertes C_{1-3} -Alkyl oder Phenyl-substituiertes C_{1-3} -Alkyl ist, oder

R^{18} und R^{19} jeweils CH_2 sind, die zusammen mit N einen heterocyclischen Ring mit 4 bis 6 Atomen bilden,

n 0-4 ist,

q 1-4 ist,

m 1-4 ist,

oder ein pharmazeutisch verträgliches Salz davon, wobei der Ausdruck "Cycloalkyl" C_{3-8} -Cycloalkyl bedeutet.

2. Verbindung der Formel (I) nach Anspruch 1, wobei A NR^5R^6 ist, wobei R^5 Wasserstoff und R^6 $(\text{CH}_2)_q$ -B ist, wobei q 1 - 3 ist und B -C(O)W ist.

3. Verbindung der Formel (I) nach Anspruch 1 oder 2, wobei W OR^9 und R^9 Wasserstoff, C_{1-5} -Alkyl, Phenyl-substituiertes C_{1-2} -Alkyl, C_{5-6} -Cycloalkyl oder C_{5-6} -Cycloalkyl-substituiertes C_{1-3} -Alkyl ist.

4. Verbindung der Formel (I) nach einem der Ansprüche 1 bis 3, wobei die Konfiguration an den Positionen 3 und 4 des Piperidinringes R ist.

5. Verbindung der Formel (I) nach einem der Ansprüche 1 bis 4 ausgewählt aus der Gruppe bestehend aus $\text{QCH}_2\text{CH}[\text{CH}_2(\text{C}_6\text{H}_5)]\text{C}(\text{O})\text{OH}$, $\text{QCH}_2\text{CH}_2\text{CH}(\text{C}_6\text{H}_5)\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{CH}_2$, $\text{QCH}_2\text{CH}_2\text{CH}(\text{C}_6\text{H}_5)\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{CH}_2\text{CH}_3$, $\text{Q-CH}_2\text{CH}_2\text{CH}(\text{C}_6\text{H}_5)\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$, $\text{G-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{NH}_2$, $\text{G-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{NHCH}_3$, $\text{G-NHCH}_2\text{C}(\text{O})\text{NH}_2$, $\text{G-NHCH}_2\text{C}(\text{O})\text{NHCH}_3$, $\text{G-NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$, $\text{G-NH}(\text{CH}_2)_3\text{C}(\text{O})\text{OCH}_2\text{CH}_3$, $\text{G-NH}(\text{CH}_2)_3\text{C}(\text{O})\text{NHCH}_3$, $\text{G-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{OH}$, $\text{G-NH}(\text{CH}_2)_3\text{C}(\text{O})\text{OH}$, $\text{QCH}_2\text{CH}[\text{CH}_2(\text{C}_6\text{H}_{11})]\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{OH}$, $\text{QCH}_2\text{CH}[\text{CH}_2(\text{C}_6\text{H}_{11})]\text{C}(\text{O})\text{NH}(\text{CH}_2)_2\text{C}(\text{O})\text{OH}$, $\text{QCH}_2\text{CH}[\text{CH}_2(\text{C}_6\text{H}_{11})]\text{C}(\text{O})\text{NH}(\text{CH}_2)_2\text{C}(\text{O})\text{NH}_2$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{CH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OH}$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{NH}_2$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{N}(\text{CH}_3)_2$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{NHCH}(\text{CH}_3)_2$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{CH}(\text{CH}_3)_2$, $\text{Z-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{OCH}_2(\text{C}_6\text{H}_5)$, $\text{Z-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{OH}$, $\text{Z-NH}(\text{CH}_2)_2\text{C}(\text{O})\text{NHCH}_2\text{CH}_3$, $\text{Z-NH}(\text{CH}_2)_3\text{C}(\text{O})\text{NHCH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{NHCH}_2\text{C}(\text{O})\text{OH}$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{C}(\text{O})\text{OCH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{O}(\text{CH}_2)_4\text{CH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{C}(\text{O})\text{NHCH}_3$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{O-(4-methoxycyclohexyl)}$, $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}_2\text{C}(\text{O})\text{NHCH}_2(\text{C}_6\text{H}_5)$, und $\text{Z-NHCH}_2\text{C}(\text{O})\text{OCH}(\text{CH}_3)\text{OC}(\text{O})\text{CH}_3$,
wobei

Q trans-3,4-Dimethyl

bezeichnet

G

bezeichnet

und Z

15 bezeichnet
und ein pharmazeutisch verträgliches Salz davon.

6. Verbindung der Formel (I) nach einem der Ansprüche 1 bis 5, ausgewählt aus der Gruppe bestehend aus (3R,4R,S)-Z-NHCH₂C(O)OCH₂CH(CH₃)₂, (+) Z-NHCH₂C(O)OH, (-) Z-ONHCH₂C(O)OH, (3R,4R,R)-ZNHCH₂C(O)OCH₂CH(CH₃)₂, (3S,4S,S)-ZNHCH₂C(O)OCH₂CH(CH₃)₂, (3S,4S,R)-ZNHCH₂C(O)OCH₂CH(CH₃)₂, (3R,4R)-ZNHCH₂C(O)NHCH₂(C₆H₅) und (3R,4R)-G-NH(CH₂)₃C(O)OH, oder ein pharmazeutisch verträgliches Salz davon.
7. [(2-[[4-(3-Hydroxyphenyl)-3,4-dimethyl-1-piperidinyl]methyl]-1-oxo-3-phenylpropyl)amino]-essigsäure-2-methylpropylester oder ein pharmazeutisch verträgliches Salz davon.
8. (+) Enantiomer der Verbindung von Anspruch 7 oder ein pharmazeutisch verträgliches Salz davon.
9. Im wesentlichen reines Stereoisomer einer Verbindung der Formel (I) nach einem der Ansprüche 1 bis 8 oder ein pharmazeutisch verträgliches Salz davon.
10. Pharmazeutische Formulierung, die als einen Wirkstoff eine Verbindung der Formel (I) nach einem der Ansprüche 1 bis 9 oder ein pharmazeutisch verträgliches Salz davon zusammen mit einem oder mehreren pharmazeutisch verträglichen Exzipienten, Trägern oder Verdünnungsmitteln dafür enthält.
11. Verbindung der Formel (I) nach einem der Ansprüche 1 bis 9 oder ein pharmazeutisch verträgliches Salz davon zur Verwendung bei der Behandlung von reizbarem Bowel Syndrome oder zur Verwendung bei der Behandlung einer peripheren Auswirkung eines Opioids oder zur Verwendung bei der Behandlung von Konstipation, Übelkeit oder Erbrechen oder zur Verwendung bei der Blockierung von mu-Rezeptoren in Säugetieren oder zur Verwendung bei der Behandlung idiopathischer Konstipation.
12. Verfahren zur Herstellung eine Verbindung der Formel (I) nach einem der Ansprüche 1 bis 9, welches umfaßt:

(A) Umsetzen einer Verbindung der Formel (II)

II

mit einer Verbindung der Formel L(CH₂)_nCR₃H-CO-E
wobei L eine Abgangsgruppe, E eine Carbonsäure-, -ester- oder -amid-Gruppe ist, gegebenenfalls gefolgt von

Veresterung, Alkylierung oder Amidierung wenn erforderlich oder gewünscht, oder

(B) Auflösen einer Racemat-Form der Verbindung der Formel (I) nach einem der Ansprüche 1 bis 9, um eine Verbindung herzustellen, die das (+)-Enantiomer ist, oder

(C) Entfernen der Schutzgruppe J von einer Verbindung der Formel

um eine Verbindung der Formel (I) herzustellen, bei der R¹ Wasserstoff ist, oder

(D) Umsetzen einer Verbindung der Formel (II), wie vorstehend beschrieben, mit einer Verbindung der Formel

oder

(E) Umsetzen einer Verbindung der Formel (II) wie vorstehend beschrieben, mit einer Verbindung der Formel

oder

(F) Hydrolysieren einer Verbindung der Formel (III)

um eine Verbindung der Formel (I) herzustellen, bei der A OH ist, oder

(G) Umsetzen einer Verbindung der Formel (IV)

mit einem geeigneten Amin oder Alkohol wenn erforderlich oder gewünscht.

Revendications

1. Isomère trans-3,4 d'un composé répondant à la Formule (I)

dans laquelle :

R¹ représente un atome d'hydrogène ou un groupe alkyle en C₁-C₅;

R² représente un atome d'hydrogène, un groupe alkyle en C₁-C₅ ou un groupe alcényle en C₂-C₆;

R³ représente un atome d'hydrogène, un groupe alkyle en C₁-C₁₀, un groupe alcényle en C₃-C₁₀, un groupe phényle, un groupe cycloalkyle, un groupe cycloalcényle en C₅-C₈, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalkyle, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalcényle en C₅-C₈ ou un groupe alkyle en C₁-C₃ substitué par un groupe phényle;

A représente OR⁴ ou NR⁵R⁶;

où :

R⁴ représente un atome d'hydrogène, un groupe alkyle en C₁-C₁₀, un groupe alcényle en C₂-C₁₀ un groupe cycloalkyle, un groupe cycloalcényle en C₅-C₈, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalkyle, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalcényle en C₅-C₈ ou un groupe alkyle en C₁-C₃ substitué par un groupe phényle;

R⁵ représente un atome d'hydrogène ou un groupe alkyle en C₁-C₃;

R⁶ représente un atome d'hydrogène ou un groupe alkyle en C₁-C₁₀, un groupe alcényle en C₃-C₁₀, un groupe cycloalkyle, un groupe phényle, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalkyle, un groupe cycloalcényle en C₅-C₈, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalcényle en C₅-C₈, un groupe alkyle en C₁-C₃ substitué par un groupe phényle ou (CH₂)q-B;

ou

R⁵ et R⁶ représentent chacun CH₂, qui ensemble avec N forment un noyau hétérocyclique à 4 à 6 membres;

où :

B représente

ou NR^7R^8 ;

où :

R^7 représente un atome d'hydrogène ou un groupe alkyle en $\text{C}_1\text{-C}_3$;

R^8 représente un atome d'hydrogène, un groupe alkyle en $\text{C}_1\text{-C}_{10}$, un groupe alcényle en $\text{C}_3\text{-C}_{10}$, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalkyle, un groupe cycloalkyle, un groupe cycloalcényle en $\text{C}_5\text{-C}_8$, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalcényle en $\text{C}_5\text{-C}_8$, un groupe phényle ou un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe phényle; où

R^7 et R^8 représentent chacun CH_2 , qui ensemble avec N forment un noyau hétérocyclique à 4 à 6 membres;

W représente OR^9 , $\text{NR}^{10}\text{R}^{11}$, ou OE; où :

R^9 représente un atome d'hydrogène, un groupe alkyle en $\text{C}_1\text{-C}_{10}$, un groupe alcényle en $\text{C}_2\text{-C}_{10}$, un groupe cycloalkyle, un groupe cycloalcényle en $\text{C}_5\text{-C}_8$, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalkyle, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalcényle en $\text{C}_5\text{-C}_8$ ou un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe phényle;

R^{10} représente un atome d'hydrogène ou un groupe alkyle en $\text{C}_1\text{-C}_3$;

R^{11} représente un atome d'hydrogène, un groupe alkyle en $\text{C}_1\text{-C}_{10}$, un groupe alcényle en $\text{C}_3\text{-C}_{10}$, un groupe phényle, un groupe cycloalkyle, un groupe cycloalcényle en $\text{C}_5\text{-C}_8$, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalkyle, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe phényle ou

ou

R^{10} et R^{11} représentent chacun CH_2 , qui ensemble avec N forment un noyau hétérocyclique à 4 à 6 membres;

E représente

où :

R^{12} représente un groupe méthylène substitué par un groupe alkyle en $\text{C}_1\text{-C}_3$,

R^{13} représente un groupe alkyle en $\text{C}_1\text{-C}_{10}$;

D représente OR^{14} ou $\text{NR}^{15}\text{R}^{16}$, où :

R^{14} représente un atome d'hydrogène, un groupe alkyle en $\text{C}_1\text{-C}_{10}$, un groupe alcényle en $\text{C}_2\text{-C}_{10}$, un groupe cycloalkyle, un groupe cycloalcényle en $\text{C}_5\text{-C}_8$, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalkyle, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalcényle en $\text{C}_5\text{-C}_8$ ou un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe phényle;

R^{15} représente un atome d'hydrogène, un groupe alkyle en $\text{C}_1\text{-C}_{10}$, un groupe alcényle en $\text{C}_3\text{-C}_{10}$, un groupe phényle, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe phényle, un groupe cycloalkyle, un groupe cycloalcényle en $\text{C}_5\text{-C}_8$, un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalkyle ou un groupe alkyle en $\text{C}_1\text{-C}_3$ substitué par un groupe cycloalcényle en $\text{C}_5\text{-C}_8$;

R^{16} représente un atome d'hydrogène ou un groupe alkyle en $\text{C}_1\text{-C}_3$;

R^{15} et R^{16} représentent chacun CH_2 , qui ensemble avec N forment un noyau hétérocyclique à 4 à 6 membres;

Y représente OR^{17} ou $\text{NR}^{18}\text{R}^{19}$;

où :

R¹⁷ représente un atome d'hydrogène, un groupe alkyle en C₁-C₁₀, un groupe alcényle en C₂-C₁₀, un groupe cycloalkyle, un groupe cycloalcényle en C₅-C₈, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalkyle, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalcényle en C₅-C₈ ou un groupe alkyle en C₁-C₃ substitué par un groupe phényle;

R¹⁸ représente un atome d'hydrogène ou un groupe alkyle en C₁-C₃;

R¹⁹ représente un atome d'hydrogène, un groupe alkyle en C₁-C₁₀, un groupe alcényle en C₃-C₁₀, un groupe phényle, un groupe cycloalkyle, un groupe cycloalcényle en C₅-C₈, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalkyle, un groupe alkyle en C₁-C₃ substitué par un groupe cycloalcényle en C₅-C₈ ou un groupe alkyle en C₁-C₃ substitué par un groupe phényle; ou

R¹⁸ et R¹⁹ représentent chacun CH₂, qui ensemble avec N forment un noyau hétérocyclique à 4 à 6 membres; n vaut 0 à 4;

q vaut 1 à 4;

m vaut 1 à 4;

ou un sel pharmaceutiquement acceptable de celui-ci, où le terme "cycloalkyle" représente un groupe cycloalkyle en C₃-C₈.

2. Composé répondant à la Formule (I) selon la revendication 1, dans lequel A représente NR⁵R⁶, dans lequel R⁵ représente un atome d'hydrogène et R⁶ représente (CH₂)_q-B, où q vaut 1 à 3 et B représente -C(O)W.

3. Composé répondant à la Formule (I) selon les revendications 1 ou 2, dans lequel W représente OR⁹ et R⁹ représente un atome d'hydrogène, un groupe alkyle en C₁-C₅, un groupe alkyle en C₁-C₂ substitué par un groupe phényle, un groupe cycloalkyle en C₅-C₆ ou un groupe alkyle en C₁-C₃ substitué par un groupe cycloalkyle en C₅-C₆.

4. Composé répondant à la Formule (I) selon l'une quelconque des revendications 1 à 3, dans lequel la configuration aux positions 3 et 4 du noyau de pipéridine est R.

5. Composé répondant à la Formule (I) selon l'une quelconque des revendications 1 à 4, choisi parmi le groupe constitué de

QCH₂CH[CH₂(C₆H₅)]C(O)OH, QCH₂CH₂CH(C₆H₅)C(O)NHCH₂C(O)OCH₂CH₃,
 QCH₂CH₂CH(C₆H₅)C(O)NHCH₂C(O)OH, Q-CH₂CH₂CH(C₆H₅)C(O)NHCH₂C(O)NHCH₃, Q-
 CH₂CH₂CH(C₆H₅)C(O)NHCH₂C(O)NHCH₂CH₃, G-NH(CH₂)₂C(O)NH₂, G-NH(CH₂)₂C(O)NHCH₃, G-
 NHCH₂C(O)NH₂, G-NHCH₂C(O)NHCH₃, G-NHCH₂C(O)NHCH₂CH₃, G-NH(CH₂)₃C(O)OCH₂CH₃, G-
 NH(CH₂)₃C(O)NHCH₃, G-NH(CH₂)₂C(O)OH, G-NH(CH₂)₃C(O)OH, QCH₂CH[CH₂(C₆H₁₁)]C(O)NHCH₂C(O)OH,
 QCH₂CH[CH₂(C₆H₁₁)]C(O)NH(CH₂)₂C(O)OH, QCH₂CH[CH₂(C₆H₁₁)]C(O)NH(CH₂)₂C(O)NH₂, Z-
 NHCH₂C(O)OCH₂CH₃, Z-NHCH₂C(O)OH, Z-NHCH₂C(O)NH₂, Z-NHCH₂C(O)N(CH₃)₂, Z-
 NHCH₂C(O)NHCH(CH₃)₂, Z-NHCH₂C(O)OCH₂CH(CH₃)₂, Z-NHCH₂C(O)OCH₂(C₆H₅), Z-NH(CH₂)₂C(O)OH, Z-
 NH(CH₂)₂C(O)NHCH₂CH₃, Z-NH(CH₂)₃C(O)NHCH₃, Z-NHCH₂C(O)NHCH₂C(O)OH, Z-
 NHCH₂C(O)OCH₂C(O)OCH₃, Z-NHCH₂C(O)O(CH₂)₄CH₃, Z-NHCH₂C(O)OCH₂C(O)NHCH₃, Z-NHCH₂C(O)O-(4-
 méthoxycyclohexyle), Z-NHCH₂C(O)OCH₂C(O)NHCH₂(C₆H₅), et Z-NHCH₂C(O)OCH(CH₃)OC(O)CH₃,
 dans lesquels :

Q représente un groupe trans-3,4-diméthyle

G représente

et
Z représente

et un sel pharmaceutiquement acceptable de celui-ci.

6. Composé répondant à la Formule (I) selon l'une quelconque des revendications 1 à 5, choisi parmi le groupe constitué de

(3R,4R,S)-Z-NHCH₂C(O)OCH₂CH(CH₃)₂, (+)-Z-NHCH₂C(O)OH, (-)-Z-NHCH₂C(O)OH, (3R,4R,R)-Z-NHCH₂C(O)OCH₂CH(CH₃)₂, (3S,4S,S)-Z-NHCH₂C(O)OCH₂CH(CH₃)₂, (3S,4S,R)-Z-NHCH₂C(O)OCH₂CH(CH₃)₂, (3R,4R)-Z-NHCH₂C(O)NHCH₂(C₆H₅) et (3R,4R)-G-NH(CH₂)₃C(O)OH, ou un sel pharmaceutiquement acceptable de celui-ci.

7. Ester 2-méthylpropylique de l'acide [(2-[[4-(3-hydroxyphényl)-3,4-diméthyl-1-pipéridinyl]méthyl]-1-oxo-3-phénylpropyl)amino]acétique, ou un sel pharmaceutiquement acceptable de celui-ci.

8. Enantiomère (+) du composé selon la revendication 7, ou un sel pharmaceutiquement acceptable de celui-ci.

9. Stéréo-isomère essentiellement pur d'un composé répondant à la Formule (I) selon l'une quelconque des revendications 1 à 8, ou un sel pharmaceutiquement acceptable de celui-ci.

10. Formulation pharmaceutique comprenant comme ingrédient actif un composé répondant à la Formule (I) selon l'une quelconque des revendications 1 à 9, ou un sel pharmaceutiquement acceptable de celui-ci, en association avec un ou davantage d'excipients, supports ou diluants pharmaceutiquement acceptables pour celui-ci.

11. Composé répondant à la Formule (I) selon l'une quelconque des revendications 1 à 9, ou un sel pharmaceutiquement acceptable de celui-ci, pour l'utilisation dans le traitement du syndrome de l'intestin irritable; ou pour l'utilisation dans le traitement d'un effet périphérique d'un opioïde; ou pour l'utilisation dans le traitement de la constipation, de la nausée ou des vomissements; ou pour l'utilisation dans le blocage des récepteurs mu chez un mammifère; ou pour l'utilisation dans le traitement de la constipation idiopathique.

12. Procédé de préparation d'un composé répondant à la Formule (I) selon l'une quelconque des revendications 1 à 9, qui comprend

(A) la réaction d'un composé répondant à la Formule (II)

II

avec un composé répondant à la formule

dans laquelle L représente un groupe sortant; E représente un groupe d'acide carboxylique, d'ester ou d'amide; éventuellement suivie par une estérification, une alkylation ou une amidation, si nécessaire ou souhaitée; ou

(B) la résolution d'une forme racémique du composé répondant à la Formule (I) selon l'une quelconque des revendications 1 à 9, de façon à préparer un composé qui est l'énantiomère (+); ou

(C) l'élimination du groupe protecteur J d'un composé répondant à la formule

de façon à préparer un composé répondant à la Formule (I) dans laquelle R¹ représente un atome d'hydrogène; ou

(D) la réaction d'un composé répondant à la Formule (II) tel que décrit ci-dessus, avec un composé répondant à la formule

ou

(E) la réaction d'un composé répondant à la Formule (II) tel que décrit ci-dessus, avec un composé répondant à la formule

ou

(F) l'hydrolyse d'un composé répondant à la Formule III

de façon à préparer un composé répondant à la Formule (I) dans laquelle A représente OH; ou
(G) la réaction d'un composé répondant à la Formule IV

avec une amine ou un alcool approprié, si nécessaire ou souhaitée.
